Building AI: The Growing Role of Private Capital

AI is becoming much more than a technology story. It is also becoming a very large infrastructure buildout. More data centers need to be built, and those data centers need huge amounts of power and capital. Goldman Sachs Research estimates that global AI investment could exceed $1 trillion[1] in 2026. McKinsey estimates that nearly $7 trillion[2] of data center investment may be needed through 2030. Ares also estimates that meeting U.S. power demand through 2030 could require about 500 GW of new generating capacity and roughly $2 trillion of investment[3].

We believe large alternative asset managers are already helping fund this buildout. In August 2026, NVIDIA announced partnerships with Apollo, BlackRock, Blackstone, Brookfield, Goldman Sachs and KKR to create AI compute financing platforms that aim to mobilize more than $500 billion of third-party capital[4]. Brookfield has also launched a $100 billion[5] AI Infrastructure Program that will invest across energy, land, data centers and compute. Blackstone has announced plans to invest more than $25 billion[6] in Pennsylvania's digital and energy infrastructure and help bring in another $60 billion of investment.

For investors, this creates another way to think about the AI opportunity. The focus does not have to be only on chipmakers and technology companies. S&P[7] notes that there is already growing overlap between infrastructure and private equity in areas such as data, telecom, renewable power and distributed generation. We believe large alternative asset managers are well positioned to participate in this shift because they have historically raised large pools of capital and invested across different parts of the same AI infrastructure buildout. One part of the business may lend to a data-center operator, another may invest equity in a new data-center development, while another may help finance the power generation, transmission or other infrastructure needed to support it. This gives these managers several ways to participate in the AI story without making a narrow bet on one technology or one company.

That is where the WHITEWOLF Publicly Listed Private Equity ETF (ticker: LBO) fits into the picture. LBO provides exposure to a basket of leading publicly traded alternative asset managers, many of which are helping raise, invest and manage the capital needed for AI infrastructure. LBO is not an AI technology ETF. Instead, it gives investors exposure to some of the firms financing data centers, power, compute and other infrastructure that supports the growth of AI. As the AI buildout expands, these asset managers may benefit from managing and deploying more capital across the ecosystem.

Important Notice

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a Prospectus or Summary Prospectus with this and other information about the Fund, please call +1-215.330.4476.

Read the prospectus or summary prospectus carefully before investing.

Investments involve risk. Principal loss is possible. Redemptions are limited and often commissions are charged on each trade. Unlike mutual funds, ETFs may trade at a premium or discount to their net asset value.

Investment Risk. When you sell your Shares of the Fund, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets.

Listed Private Equity Companies Risk. There are certain risks inherent in investing in listed private equity companies, which encompass financial institutions or vehicles whose principal business is to invest in and lend capital to or provide services to privately held companies. Generally, little public information exists for private and thinly traded companies, and there is a risk that investors may not be able to make a fully informed investment decision. The Fund is also subject to the underlying risks which affect the listed private equity companies in which the financial institutions or vehicles held by the Fund invest. Listed private equity companies are subject to various risks depending on their underlying investments, which include additional liquidity risk, industry risk, foreign security risk, currency risk, valuation risk and credit risk.

Business Development Company (BDC) Risk. BDCs generally invest in less mature U.S. private companies or thinly traded U.S. public companies which involve greater risk than well-established publicly traded companies. While the BDCs in which the Fund invests are expected to generate income in the form of dividends, certain BDCs during certain periods of time may not generate such income. The Fund will indirectly bear its proportionate share of any management fees and other operating expenses incurred by the BDCs and of any performance-based or incentive fees payable by the BDCs in which it invests, in addition to the expenses paid by the Fund.

Master Limited Partnership Risk. An MLP is an entity that is classified as a partnership under the Internal Revenue Code of 1986, as amended, and whose partnership interests or "units" are traded on securities exchanges like shares of corporate stock. Investments in MLP units are subject to certain risks inherent in a partnership structure, including (i) tax risks, (ii) the limited ability to elect or remove management or the general partner or managing member, (iii) limited voting rights and (iv) conflicts of interest between the general partner or managing member and its affiliates and the limited partners or members.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.
