DISCIPLINE FUND ETF

Fund Summary

INVESTMENT OBJECTIVE

The Discipline Fund ETF (the “Fund”) seeks long-term growth of capital.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

ANNUAL FUND OPERATING EXPENSES (EXPENSES THAT YOU PAY EACH YEAR AS A PERCENTAGE OF THE VALUE OF YOUR INVESTMENT)

Management Fee	0.39%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Acquired Fund Fees and Expenses ¹	0.04%
Total Annual Fund Operating Expenses	0.43%
Less Fee Waiver ²	(0.04%)
Total Annual Fund Operating Expenses After Fee Waiver	0.39%

¹ “Acquired Fund Fees and Expenses” are indirect fees and expenses that the Fund incurs from investing in the shares of other investment companies. Total Annual Fund Operating Expenses do not correlate to the ratio of expenses to average net assets provided in the Financial Highlights section of the Prospectus, which reflects only the operating expenses of the Fund and does not include acquired fund fees and expenses.

² The Fund’s investment adviser has contractually agreed to waive all or a portion of its management fee to the extent necessary to offset all AFFE. This waiver agreement will continue in effect for the life of the Fund or until terminated sooner only by agreement of the investment adviser and the Fund’s Board of Trustees.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:	Five Years:	Ten Years:
\$40	\$125	\$219	\$493

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal year ended July 31, 2024, the Fund’s portfolio turnover rate was 13% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund’s Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing in a portfolio of other large, broad-based ETFs that the Sub-Adviser (Orcam Financial Group, LLC d/b/a Discipline Funds) believes can reduce the Fund’s relative stock and bond risks when compared to a traditional diversified market cap-weighted index fund. The Fund will provide a globally diversified portfolio, which will be systematically reallocated depending on the Sub-Adviser’s assessment of the risks in the then-current market environment. The Fund will seek long-term growth of capital with reduced investment volatility.

The Methodology

The Sub-Adviser uses two systematic, data-driven algorithms designed to calculate the current risk level of global equity and bond markets based on market valuations and macroeconomic data, including measurements like interest rate levels, gross domestic product (GDP), and consumer price index changes. The Sub-Adviser also quantifies the time horizon over which an instrument can be expected to generate reasonable rates of returns, similar to fixed income duration calculations (“Defined Duration”).

The algorithm helps the Sub-Adviser identify macroeconomic risks that might correspond with above- or below-average equity market and bond market risks. The algorithms use a so-called “countercyclical rebalancing methodology” to reallocate the Fund’s portfolio relative to the then-current macroeconomic risks. Essentially, a countercyclical rebalancing methodology seeks to adjust a portfolio’s holdings to account for current market and macroeconomic data. In contrast, standard passively-managed funds (which use pro-cyclical methodologies) will generally hold stocks and bonds in the same percentage allocation regardless of market valuations and macroeconomic conditions.

The algorithms rely on data as reported by the U.S. Federal Reserve (which reports both U.S. and international data), the European Central Bank, U.S. Treasury, Bureau of Labor Statistics, World Exchanges, and third-party financial data providers that reflect current and expected conditions of the U.S. and global economy and financial markets including such inputs as interest rates and macroeconomic production and/or engagement.

In the event of a large equity market or macroeconomic decline (that is, the U.S. economy is performing poorly), the countercyclical rebalancing methodology may result in a higher equity allocation. For example, if the stock market declined and a typical passively-managed 50-50 portfolio became a 40-60 stock-bond allocation, it would again be reallocated back to its original 50-50 stock-bond allocation. Whereas, the algorithm may recommend that the Fund be reallocated to a 60-40 stock-bond allocation to account for the potential that equities often become less risky after they have declined in value.

The algorithms are updated monthly. Depending on the algorithms’ outputs, the Fund’s portfolio will be reallocated accordingly. The Sub-Adviser will recommend that the Fund’s portfolio be generally comprised of between four and eight underlying fund holdings.

Equity-Bond Allocation

The Fund’s typical Defined Duration target is between 8 and 12 years, but the Fund attempts to maintain an average Defined Duration of approximately 10 years. The Sub-Adviser uses Defined Duration to determine the Fund’s equity-bond allocation. When the algorithm indicates equity market risk is average, the Fund will generally allocate approximately 50 percent of its assets to the equity sleeve and 50 percent of its assets to the bond sleeve. Depending on the then-current risk level of the equity markets, the allocations will shift but will not exceed a 70-30 equity-bond allocation or a 30-70 equity-bond allocation.

U.S.-Foreign Equity Sleeve Allocation

The Fund’s allocation between broad-based U.S. equity ETFs and broad-based foreign focused equity ETFs will generally align with the then-current market cap weighting (combined dollar market value) of the U.S. and foreign equity markets. For example, if the current market cap weighting of the global equity market is 55% U.S. stocks and 45% foreign stocks, when reallocated, the Fund’s allocation to equity securities will reflect a similar allocation of U.S. ETFs (about 55%) and foreign ETFs (about 45%).

The Sub-Adviser uses data reported by The World Bank to determine the market cap weightings of U.S. and foreign equity markets, the sum of which is approximately equivalent to the market cap weighting of the overall global equity market. As of the date of this prospectus, the market weightings are approximately 45% U.S. equity markets and 55% foreign equity markets.

For the Fund’s equity exposure, the Sub-Adviser evaluates broad-based equity ETFs that are publicly traded in U.S. markets. The Fund may hold broad-based U.S., international, global, or emerging markets ETFs. Although the Fund may hold U.S.-only ETFs, the Fund will not otherwise hold individual country ETFs. International and global ETFs may have exposure to any foreign markets, whether developed, emerging, or frontier. The Fund will invest in large, low-cost, broad-based, cap-weighted, equity ETFs. That is, at the time of investment, the underlying equity ETFs will: (i) have assets of at least \$100 million; (ii) have total expenses of 0.25% or less, (iii) be broad-based (as described below), and (iv) include individual portfolio holdings in amounts that largely correspond to their total market capitalization. The Sub-Adviser considers an ETF to be broad-based if it seeks

to track the performance of an index that, in turn, is designed to reflect the movement of an equity market or significant segment of a market (e.g., 500 small cap stocks).

Under normal market conditions, the Fund's equity sleeve will be comprised of at least one U.S. equity-focused ETF and one foreign equity-focused ETF. The Fund will generally not hold more than four equity ETFs at a particular time.

Bond Sleeve Allocation

Additionally, the Sub-Adviser uses a second systematic, data-driven algorithm for the Fund's bond portfolio, which is also based on market valuations and macroeconomic data, to evaluate the interest rate and credit risk of bond markets. Like the equity market algorithm, the bond market algorithm is designed to identify periods of above- or below-average economic and market activity. The bond market algorithm also considers bond-specific data, like average credit spreads and bond yields. A credit spread is the difference in yield between a U.S. Treasury bond and another debt security of the same maturity but different credit quality, thereby allowing a comparison between a corporate bond and a risk-free alternative. Average credit spreads are often used as barometer of economic health. That is, when spreads are below average, that often portends a good economic environment.

For instance, the algorithm might identify a period of below average credit spreads and strong economic growth to be consistent with a period of higher than average junk bond market risk. Further, during an economic expansion, aggregate bond markets typically become higher yielding on average. That is because higher interest rates often correlate with macroeconomic improvement. In that case, the Sub-Adviser may determine that low quality & longer duration bond funds are then subject to greater than normal risks. As a result, the Sub-Adviser may recommend the Fund hold ETFs that hold higher quality bonds such as U.S. government bonds and investment grade corporate bonds.

In addition to credit quality, the Sub-Adviser may recommend reallocating the bond sleeve to have a similar duration, a shorter duration, or a longer duration than the then-current duration of a typical aggregate bond fund (described below). Duration is a measure of a bond price's sensitivity to interest rate changes. Bonds with longer durations tend to be more sensitive to interest rate changes. In contrast, bonds with shorter durations tend to be less sensitive to interest rate changes. For example, during periods of poor economic growth and higher than average credit spreads the Fund's bond market algorithm might alter the bond allocation so the Fund holds underlying funds that, in turn, hold lower duration bonds with reduced interest rate risk.

The Sub-Adviser considers a typical aggregate bond fund to be an exchange traded fund that holds a combination of government Treasury securities, corporate bonds, mortgage-backed securities, asset-backed securities, and municipal bonds that closely reflects the broader U.S. bond market.

For the Fund's bond exposure, the Sub-Adviser considers the largest bond ETFs that are publicly traded in U.S. markets. The Fund's bond sleeve will normally hold U.S. investment-grade aggregate bond ETFs, U.S. investment-grade corporate bond ETFs, and U.S. Treasury Bond ETFs. In addition, the Fund may hold underlying ETFs that, in turn, hold high-yield (junk) bonds. In general, investment-grade bonds are rated within one of the four highest ratings categories by a nationally-recognized statistical ratings organization or if unrated, determined by the underlying ETF's investment manager to be of equivalent quality. Bonds rated below investment grade are considered high-yield (junk) bonds.

Under normal market conditions, the Fund's bond sleeve will be comprised of between two and four underlying ETFs. Each underlying ETF will be passively-managed. That is, the underlying ETFs will seek to track the performance of an index.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading "*Additional Information About the Fund's Principal Investment Risks.*"

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. Therefore, you may lose money by investing in the Fund. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a

security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security, such as geopolitical events and environmental disasters. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Foreign Investment Risk. Returns on investments in underlying ETFs that invest foreign securities could be more volatile than, or trail the returns on, ETFs that invest in U.S. securities. Investments in or exposures to foreign securities are subject to special risks, including risks associated with foreign securities generally, including differences in information available about issuers of securities and investor protection standards applicable in other jurisdictions; capital controls risks, including the risk of a foreign jurisdiction imposing restrictions on the ability to repatriate or transfer currency or other assets; currency risks; political, diplomatic and economic risks; regulatory risks; and foreign market and trading risks, including the costs of trading and risks of settlement in foreign jurisdictions.

Emerging Markets Risk. The Fund may invest indirectly in companies organized in developing and emerging market nations, which would typically include countries such as China, India, Taiwan, Thailand, Russia, Peru, Colombia and others. The Fund, however, defers to each underlying Fund's definition of developing and emerging markets, and the underlying Funds definitions may differ from one another. Nonetheless, investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares and cause the Fund to decline in value.

Frontier Markets Risk. Compared to foreign developed and emerging markets, investing in frontier markets may involve heightened volatility, greater political, regulatory, legal and economic uncertainties, government ownership or control of parts of the private sector and of certain companies, trade barriers, exchange controls, less liquidity, dependence on particular commodities or international aid, high levels of inflation, and greater custody risk.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Bond and Fixed Income Risks. The Fund will be subject to bond and fixed income risks when it invests in bond ETFs.

Changes in interest rates generally will cause the value of fixed-income and bond instruments held by underlying bond ETFs to vary inversely to such changes. Prices of longer-term fixed-income instruments generally fluctuate more than the prices of shorter-term fixed income instruments as interest rates change. Fixed-income instruments that are fixed-rate are generally more susceptible than floating rate loans to price volatility related to changes in prevailing interest rates. The prices of floating rate fixed-income instruments tend to have less fluctuation in response to changes in interest rates, but will have some fluctuation, particularly when the next interest rate adjustment on such security is further away in time or adjustments are limited in amount over time. Underlying bond ETFs may invest in short-term securities that, when interest rates decline, affect the ETF's yield as these securities mature or are sold and the ETF purchases new short-term securities with lower yields. An obligor's willingness and ability to pay interest or to repay principal due in a timely manner may be affected by, among other factors, its cash flow.

In addition, underlying bond ETFs may invest in various fixed income and floating rate securities (such as municipal securities and high-yield (junk) bond securities) that are subject to additional risks. Those risks may be material and the risks differ for each of the types of underlying investments.

Fund of Funds Risk. Because it invests primarily in other funds, the Fund's investment performance largely depends on the investment performance of the selected underlying exchange-traded funds (ETFs). An investment in the Fund is subject to the risks associated with the ETFs that then-currently comprise the Fund's portfolio. At times, certain of the segments of the market represented by constituent ETFs in the Fund's portfolio may be out of favor and underperform other segments. The Fund will indirectly pay a proportional share of the expenses of the underlying ETFs in which it invests (including operating expenses and management

fees), which are identified in the fee schedule above as “Acquired Fund Fees and Expenses.” The Adviser has agreed to waive its fees to offset those expenses. If the investment advisory fee waiver is discontinued, an investment in the Fund will entail more costs and expenses than the combined costs and expenses of direct investments in the underlying ETFs.

Quantitative Security Selection Risk. Data for some ETFs and for some of the companies in which the underlying ETFs invest may be less available and/or less current than data for companies in other markets due to various causes, including without limitation, market disruptions, accounting practices, regulatory matters, acts of God, etc. The ETFs selected using a quantitative model could perform differently from the financial markets as a whole, as a result of the characteristics used in the analysis, the weight placed on each characteristic, and changes in the characteristic’s historical trends.

Countercyclical Investing Style Risk. The Fund is subject to the risk of periods of underperformance versus comparable passively-managed funds due to counter-cyclical investing. For example, if the equity markets are rising and the economy is robust, the counter-cyclical style may cause the Fund to hold less equity securities, which may cause it to underperform for a period.

Management Risk. The Fund is actively managed and may not meet its investment objective based on the Adviser’s or Sub-Adviser’s success or failure to implement investment strategies for the Fund.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value (“NAV”). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the Cboe BZX Exchange, Inc. (the “Exchange”) or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the “spread,” that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund’s trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity.

PERFORMANCE

The following information provides some indication of the risks of investing in the Fund. The bar chart shows the Fund's performance for calendar years ended December 31. The table shows how the Fund's average annual returns for one-year and since inception periods compared with those of a custom blended index that reflects the performance of the market sectors in which the Fund invests and broad measures of market performance. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Performance information is also available on the Fund's website at <https://disciplinefunds.com/dscf/> or by calling the Fund at (215) 330-4476.

Calendar Year Total Return as of December 31

For the year-to-date period ended September 30, 2024, the Fund's total return was 7.32%. During the period of time shown in the bar chart, the highest quarterly return was 7.63% for the quarter ended December 31, 2023, and the lowest quarterly return was -8.72% for the quarter ended June 30, 2022.

Average Annual Total Returns

For the Periods Ended December 31, 2023

Discipline Fund ETF	1 Year	Since Inception (9/20/2021)
Return Before Taxes	10.50%	-2.76%
Return After Taxes on Distributions	9.52%	-3.49%
Return After Taxes on Distributions and Sale of Fund Shares	6.31%	-2.33%
Solactive US Aggregate Bond Index	5.28%	-4.47%
Solactive GBS Global Markets All Cap USD Index TR	22.14%	1.94%
Custom Blended Benchmark¹	12.20%	-1.54%
Solactive GBS Developed Markets ex North America Large & Mid Cap NTR Index	17.91%	0.72%
Solactive GBS Emerging Markets Large & Mid Cap NTR Index	11.60%	-4.91%
Solactive GBS United States 1000 NTR Index	26.11%	3.90%
Solactive US Aggregate Bond Index	5.28%	-4.47%

¹ 20.25% Solactive GBS United States 1000 NTR Index, 20.25% Solactive GBS Developed Markets ex North America Large & Mid Cap NTR Index, 4.5% Solactive GBS Emerging Markets Large & Mid Cap Index NTR Index, 55% Solactive US Aggregate Bond Index.

After-tax returns are calculated using the highest historical individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts. In certain instances, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A

higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

INVESTMENT ADVISER & INVESTMENT SUB-ADVISER

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the “Adviser”)
Investment Sub-Adviser: Orcam Financial Group, LLC dba Discipline Funds (the “Sub-Adviser”)

PORTFOLIO MANAGERS

Cullen Roche, Chief Investment Officer of the Sub-Adviser, has been primarily responsible for the day-to-day management of the Fund since its inception in September 2021. Mr. Roche provides his recommendations to Messrs. Richard Shaner and Wm. Joshua Russell, Portfolio Managers of the Adviser. Mr. Shaner has been primarily and jointly responsible for the day-to-day management of the Fund since 2021. Mr. Russell has been primarily and jointly responsible for the day-to-day management of the Fund since January 2023.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis only in large blocks of Shares known as “Creation Units,” and only APs (typically, broker-dealers) may purchase or redeem Creation Units. Creation Units generally are issued and redeemed ‘in-kind’ for securities and partially in cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Once created, individual Shares generally trade in the secondary market at market prices that change throughout the day. Market prices of Shares may be greater or less than their NAV. **Except when aggregated in Creation Units, the Fund’s shares are not redeemable securities.**

TAX INFORMATION

The Fund’s distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an Individual Retirement Account (“IRA”) or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

How Is the Fund Different From a Mutual Fund?

Redeemability. Mutual fund shares may be bought from, and redeemed with, the issuing fund for cash at NAV typically calculated once at the end of the business day. Shares of the Fund, by contrast, cannot be purchased from or redeemed with the Fund except by or through APs (typically, broker-dealers), and then principally for an in-kind basket of securities (and a limited cash amount). In addition, the Fund issues and redeems Shares on a continuous basis only in large blocks of Shares, called “Creation Units.”

Exchange Listing. Unlike mutual fund shares, Shares are listed for trading on the Exchange. Investors can purchase and sell Shares on the secondary market through a broker. Investors purchasing Shares in the secondary market through a brokerage account or with the assistance of a broker may be subject to brokerage commissions and charges. Secondary-market transactions do not occur at NAV, but at market prices that change throughout the day, based on the supply of, and demand for, Shares and on changes in the prices of the Fund’s portfolio holdings. The market price of Shares may differ from the NAV of the Fund. The difference between market price of Shares and the NAV of the Fund is called a premium when the market price is above the reported NAV and called a discount when the market price is below the reported NAV, and the difference is expected to be small most of the time, though it may be significant, especially in times of extreme market volatility.

Transparency. The Fund’s portfolio holdings are disclosed on its website daily after the close of trading on the Exchange and prior to the opening of trading on the Exchange the following day. A description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s Statement of Additional Information (“SAI”).

Premium/Discount Information. Information about the premiums and discounts at which Shares have traded is available at <https://disciplinefunds.com/dscf/>.

ADDITIONAL INFORMATION ABOUT THE FUND’S INVESTMENT OBJECTIVE AND PRINCIPAL INVESTMENT STRATEGIES

The Fund’s investment objective is a non-fundamental investment policy and may be changed without a vote of shareholders upon prior written notice to shareholders.

Temporary Defensive Positions. From time to time, the Fund may take temporary defensive positions that are inconsistent with its principal investment strategies in attempting to respond to adverse market, economic, political, or other conditions. In those instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; money market mutual funds; investment grade fixed income securities; repurchase agreements; commercial paper; cash equivalents; and exchange-traded investment vehicles that principally invest in the foregoing instruments. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective.

ADDITIONAL INFORMATION ABOUT THE FUND’S PRINCIPAL INVESTMENT RISKS

Bond and Fixed Income Risks (including High-Yield (Junk) Bonds). Certain underlying bond ETFs may invest in debt obligations traded in U.S., which are subject to one or more of the following risks:

- *Credit Risk:* Bonds are subject to varying degrees of credit risk, which are often reflected in credit ratings. The value of an issuer’s securities held by an underlying bond ETF may decline in response to adverse developments with respect to the issuer. In addition, an ETF could lose money if the issuer or guarantor of a bond is unable or unwilling to make timely principal and interest payments or to otherwise honor its obligations.
- *Interest Rate Risk.* The income generated by debt securities owned by an underlying bond ETF will be affected by changing interest rates. In addition, as interest rates rise the values of fixed income securities held by an underlying bond ETF are likely to decrease. Securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Falling interest rates may cause an issuer to redeem or “call” a security before its stated maturity, which may result in an underlying bond ETF having to reinvest the proceeds in lower yielding securities. Rising interest rates across the U.S. financial system may result in fixed-income markets becoming more volatile. A rise in rates tends to have a greater impact on the prices of longer

term or duration securities. Interest rates have recently been historically low, so an underlying bond ETF faces a heightened risk that rates may rise.

- *Liquidity Risk.* Liquidity risk exists when particular investments are difficult to purchase or sell. Markets may become illiquid when, for example, there are few, if any, interested buyers or sellers or when dealers are unwilling or unable to make a market for certain securities. As a general matter, dealers recently have been less willing to make markets for fixed income securities. An underlying bond ETF's investments in illiquid securities may reduce the return of an underlying bond ETF because it may be unable to sell such illiquid securities at an advantageous time or price. Investments in foreign securities, and securities with substantial market or credit risk tend to have the greatest exposure to liquidity risk. Illiquid securities may also be difficult to value.
- *Prepayment.* Many types of debt securities, including mortgage securities, are subject to prepayment risk. Prepayment risk occurs when the issuer of a security can repay principal prior to the security's maturity. Securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a debt security can be difficult to predict and result in greater volatility.
- *Issuer-Specific Changes.* Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security's or instrument's credit quality or value. Entities providing credit support or a maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.
- *Mortgage and Asset-Backed Securities Risks.* Mortgage- and Asset-Backed Securities are subject to certain additional risks. Rising interest rates tend to extend the duration of mortgage- and asset-backed securities, making them more sensitive to changes in interest rates. As a result, when holding mortgage- and asset-backed securities in a period of rising interest rates, an underlying bond ETF may exhibit additional volatility. In addition, mortgage- and asset-backed securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of an underlying bond ETF because it will have to reinvest that money at the lower prevailing interest rates. When interest rates rise, prepayments may decline, resulting in longer-than-anticipated maturities.
- *U.S. Government Securities Risk.* Underlying bond ETFs may invest in U.S. Treasury obligations and securities issued or guaranteed by the U.S. Treasury. U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding that these securities are backed by the full faith and credit of the United States, circumstances could arise that would prevent the payment of interest or principal. This would result in losses to relevant underlying bond ETFs and, in turn, the Fund.
- *High-Yield Debt Securities (Junk Bonds):* Some underlying bond ETFs may invest all of their total assets in debt securities that are rated below investment grade (*i.e.*, "junk bonds") by nationally recognized statistical rating organizations, or are unrated or stale-rated securities that the investment adviser believes are of comparable quality. Junk bonds are considered speculative with respect to their capacity to pay interest and repay principal in accordance with the terms of the obligation. While generally providing greater income and opportunity for gain, non-investment grade debt securities are subject to greater risks than higher-rated securities.

Companies that issue junk bonds are often highly leveraged and may not have more traditional methods of financing available to them. During an economic downturn or recession, highly leveraged issuers of high-yield securities may experience financial stress and may not have sufficient revenues to meet their interest payment obligations. Economic downturns tend to disrupt the market for junk bonds, lowering their values and increasing their price volatility. The risk of issuer default is higher with respect to junk bonds because such issues may be subordinated to other creditors of the issuer.

The credit rating from a nationally recognized statistical rating organization of a junk bond does not necessarily address its market value risk, and ratings may from time to time change to reflect

developments regarding the issuer's financial condition. The lower the rating of a junk bond, the more speculative its characteristics.

An underlying bond ETF may have difficulty selling certain junk bonds because they may have a thin trading market. The lack of a liquid secondary market may have an adverse effect on the market price and the underlying bond ETF's ability to dispose of particular issues and may also make it more difficult for an underlying bond ETF to obtain accurate market quotations in valuing these assets. In the event the underlying bond ETF experiences an unexpected level of net redemptions, the underlying bond ETF could be forced to sell its junk bonds at an unfavorable price. Prices of junk bonds have been found to be less sensitive to fluctuations in interest rates and more sensitive to adverse economic changes and individual corporate developments than those of higher-rated debt securities.

- *Inflation-Linked Debt Securities.* Inflation-linked securities include fixed and floating rate debt securities of varying maturities issued by the U.S. government, its agencies and instrumentalities, such as Treasury Inflation Protected Securities ("TIPS"). Typically, these securities are structured as fixed income investments whose principal value is periodically adjusted according to the rate of inflation. The following two structures are common: (i) the U.S. Treasury and some other issuers issue inflation-linked securities that accrue inflation into the principal value of the security and (ii) other issuers may pay out the Consumer Price Index ("CPI") accruals as part of a semi-annual coupon. Other types of inflation-linked securities exist which use an inflation index other than the CPI.

If the periodic adjustment rate measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of TIPS, even during a period of deflation, although the inflation-adjusted principal received could be less than the inflation-adjusted principal that had accrued to the bond at the time of purchase. However, the current market value of the bonds is not guaranteed and will fluctuate. Other inflation-related bonds exist which may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

Countercyclical Investing Style Risk. The Fund is subject to the risk of periods of underperformance versus comparable passively-managed funds due to counter-cyclical investing. For example, if the equity markets are rising and the economy is robust, the counter-cyclical style may cause the Fund to hold less equity securities, which may cause it to underperform for a period.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the Exchange or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares

have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.

- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. When markets are stressed, Shares could suffer erratic or unpredictable trading activity, extraordinary volatility or wide bid/ask spreads, which could cause some market makers and APs to reduce their market activity or “step away” from making a market in ETF shares. This could cause the Fund’s market price to deviate, materially, from the NAV, and reduce the effectiveness of the ETF arbitrage process. Further, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the “circuit breaker” rules, which temporarily halt trading on the Exchange when a decline in the S&P 500 Index during a single day reaches certain thresholds (e.g., 7%, 13% and 20%). There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares, and this could lead to differences between the market price of the Shares and the underlying value of those Shares.

Emerging Markets Risk. Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. For example, developing and emerging markets may be subject to (i) greater market volatility, (ii) lower trading volume and liquidity, (iii) greater social, political and economic uncertainty, (iv) governmental controls on foreign investments and limitations on repatriation of invested capital, (v) lower disclosure, corporate governance, auditing and financial reporting standards, (vi) fewer protections of property rights, (vii) restrictions on the transfer of securities or currency, and (viii) settlement and trading practices that differ from those in U.S. markets. Each of these factors may impact the ability of an underlying ETF to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares and cause underlying ETF to decline in value.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. Different types of equity securities tend to go through cycles of outperformance and underperformance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally. Recent turbulence in financial markets and reduced liquidity in credit and fixed income markets may negatively affect many issuers worldwide, which may have an adverse effect on the Fund.

Foreign Investment Risk. The underlying ETFs may invest in foreign securities, including non-U.S. dollar-denominated securities traded outside of the United States and U.S. dollar-denominated securities of foreign issuers traded in the United States. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in foreign securities, including investments in ADRs, EDRs, and GDRs, are subject to special risks, including the following:

- *Foreign Securities Risk.* Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Changes to the financial condition or credit rating of foreign issuers may also adversely affect the value of an underlying ETF’s securities. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when an underlying ETF does not price its shares, the value of the securities in an underlying ETF’s portfolio may change on days when shareholders will not be able to purchase or sell an underlying ETF’s shares. Conversely, shares of underlying ETFs may trade on days when foreign exchanges are

closed. Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Each of these factors can make investments in an underlying ETF more volatile and potentially less liquid than other types of investments.

- *Capital Controls and Sanctions Risk.* Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to government intervention and the imposition of “capital controls” or expropriation or nationalization of assets. The possible establishment of exchange controls or freezes on the convertibility of currency, or the adoption of other governmental restrictions, might adversely affect an investment in foreign securities. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets within or out of a jurisdiction. Levies may be placed on profits repatriated by foreign entities (such as an underlying ETF). Capital controls may impact the ability of an underlying ETF to buy, sell or otherwise transfer securities or currency, may adversely affect the trading market and price for Shares of an underlying ETF, and may cause an underlying ETF to decline in value.
- *Depository Receipt Risk.* An underlying ETF’s investments in foreign companies may be in the form of depository receipts, including ADRs, EDRs, and GDRs. ADRs, EDRs, and GDRs are generally subject to the risks of investing directly in foreign securities and, in some cases, there may be less information available about the underlying issuers than would be the case with a direct investment in the foreign issuer. ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. GDRs are similar to ADRs but are shares of foreign-based corporations generally issued by international banks in one or more markets around the world. Investment in ADRs and GDRs may be more or less liquid than the underlying shares in their primary trading market and GDRs may be more volatile. Depository receipts may be “sponsored” or “unsponsored” and may be unregistered and unlisted. Sponsored depository receipts are established jointly by a depository and the underlying issuer, whereas unsponsored depository receipts may be established by a depository without participation by the underlying issuer. Holders of an unsponsored depository receipt generally bear all the costs associated with establishing the unsponsored depository receipt. In addition, the issuers of the securities underlying unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the market value of the depository receipts. In general, ADRs must be sponsored, but an underlying ETF may invest in unsponsored ADRs. And underlying ETF’s investments may also include ADRs and GDRs that are not purchased in the public markets and are restricted securities that can be offered and sold only to “qualified institutional buyers” under Rule 144A of the Securities Act of 1933, as amended (the “Securities Act”).
- *Currency Risk.* Each underlying ETF’s NAV is determined on the basis of U.S. dollars; therefore, an underlying ETF may lose value if the local currency of a foreign market depreciates against the U.S. dollar, even if the local currency value of the underlying ETF’s holdings goes up. Currency exchange rates may fluctuate significantly over short periods of time. Currency exchange rates also can be affected unpredictably by intervention; by failure to intervene by U.S. or foreign governments or central banks; or by currency controls or political developments in the U.S. or abroad. Changes in foreign currency exchange rates may affect the NAV of the underlying ETFs and the price of the underlying ETF’s shares. Devaluation of a currency by a country’s government or banking authority would have a significant impact on the value of any investments denominated in that currency.
- *Political and Economic Risk.* An underlying ETF that invests in foreign securities is subject to foreign political and economic risk not associated with U.S. investments, meaning that political events (civil unrest, national elections, changes in political conditions and foreign relations, imposition of exchange controls and repatriation restrictions), social and economic events (labor strikes, rising inflation) and natural disasters occurring in a foreign country could cause the underlying ETF’s investments to experience gains or losses. An underlying ETF also could be unable to enforce its ownership rights or pursue legal remedies in countries where it invests.
- *Foreign Market and Trading Risk.* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight. Foreign markets also may have clearance and settlement procedures that make it difficult for an underlying ETF to buy and sell securities. The procedures and rules governing foreign transactions and custody (holding of the underlying ETF’s assets) also may involve delays in payment, delivery or recovery of money or

investments. These factors could result in a loss to the underlying ETF by causing it to be unable to dispose of an investment or to miss an attractive investment opportunity, or by causing underlying ETF assets to be uninvested for some period of time.

- *Developed Market Risk.* Many developed market countries have recently experienced significant economic pressures. Developed market countries generally tend to rely on the services sectors (e.g., the financial services sector) as the primary source of economic growth and may be susceptible to the risks of individual service sectors. Recently, new concerns have emerged with respect to the economic health of certain developed countries. These concerns primarily stem from heavy indebtedness of many developed countries and their perceived inability to continue to service high debt loads without simultaneously implementing stringent austerity measures. Such concerns have led to tremendous downward pressure on the economies of these countries. As a result, it is possible that interest rates on debt of certain developed countries may rise to levels that make it difficult for such countries to service high debt levels without significant help from other countries or from a central bank. Spending on health, health care and retirement pensions in most developed countries has risen dramatically over the last few years. Medical innovation, extended life expectancy and higher public expectations are likely to continue the increase in health care and pension costs. Any increase in health care and pension costs will likely have a negative impact on the economic growth of many developed countries. Developed market countries generally are dependent on the economies of certain key trading partners. Changes in any one economy may cause an adverse impact on several developed countries. In addition, heavy regulation of, among others, labor and product markets may have an adverse effect on certain issuers. Such regulations may negatively affect economic growth or cause prolonged periods of recession.
- See also Emerging Markets Risk above, and Frontier Markets Risk below.

Frontier Markets Risk. Investing in frontier market securities and currencies entails all of the risks of investing in foreign (non-U.S.) investments and investments in emerging markets, but to a heightened degree. Compared to foreign developed and emerging markets, investing in frontier markets may involve heightened volatility, greater political, regulatory, legal and economic uncertainties, less liquidity, dependence on particular commodities or international aid, high levels of inflation, and greater custody risk. Additional risks of emerging market securities may include: greater political instability (including the risk of war or natural disaster); increased risk of nationalization, expropriation, or other confiscation of assets of issuers to which the Fund is exposed; greater risk of default (by both government and private issuers); more substantial governmental involvement in the economy; less governmental supervision and regulation; differences in, or lack of, auditing and financial reporting standards, which may result in unavailability of material information about issuers; less developed legal systems; inability to purchase and sell investments or otherwise settle security or derivative transactions (*i.e.*, a market freeze); unavailability of currency hedging techniques; slower clearance and settlement; difficulties in obtaining and/or enforcing legal judgments; and significantly smaller market capitalizations of issuers.

Certain Frontier Market countries may impose restrictions on foreign investment and repatriation of investment income and capital. In addition, foreign investors, including an Underlying Fund, may be required to register the proceeds of sales, and future economic or political crises could lead to price controls, forced mergers, nationalization or the creation of government monopolies. The currencies of Frontier Market Countries may experience significant declines against the U.S. dollar, and devaluation may occur subsequent to investments in these currencies by an Underlying Fund. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, negative effects on the economies and securities markets of certain Frontier Market Countries. Frontier market securities may trade in more limited volume than comparable securities in foreign developed and emerging markets.

Frontier market securities may have different clearance and settlement procedures, which may be unable to keep pace with the volume of securities transactions or otherwise make it difficult to engage in such transactions. Settlement problems may cause the Fund to miss attractive investment opportunities, hold a portion of its assets in cash pending investment, or be delayed in disposing of a portfolio security, all of which would negatively affect an Underlying Fund's performance.

Custody services in many Frontier Market Countries remain undeveloped and, although the Fund's custodian will seek to establish control mechanisms, including the selection of sub-custodians, nominees or agents ("Sub-custodians") to register securities on behalf of an underlying fund and perform regular checks of entries on relevant securities registers to ensure that the Underlying Fund's interests continue to be recorded, there is significant transaction and custody risk in dealing in securities of Frontier Market countries.

Fund of Funds Risk. Because the Fund invests primarily in other ETFs, the Fund's investment performance largely depends on the investment performance of its underlying ETFs. An investment in the Fund is subject to the risks associated with the ETFs that comprise the Fund's portfolio. As noted above, the risks described below apply to the Fund directly and/or indirectly via its investments in one or more ETFs (e.g., fixed income risk). At times, certain of the segments of the market represented by constituent ETFs in the Fund's portfolio may be out of favor and underperform other segments. The Fund will indirectly pay a proportional share of the expenses of the underlying ETFs in which it invests (including operating expenses and management fees), which are identified in the fee schedule in the Summary section above as "Acquired Fund Fees and Expenses." The Adviser has agreed to waive its fees to offset those expenses. If the investment advisory fee waiver is discontinued, an investment in the Fund will entail more costs and expenses than the combined costs and expenses of direct investments in the underlying ETFs.

An ETF is an investment company whose goal generally is to track or replicate a desired index, such as a sector, market or global segment. ETFs are traded on exchanges and trade similarly to publicly-traded companies. ETFs also have risks and costs that are similar to publicly-traded companies. The goal of many ETFs is to correspond generally to the price and yield performance, before fees and expenses of its underlying index. The risk of not correlating to the index is an additional risk borne by the investors of such ETFs. Because ETFs trade on an exchange, they may not trade at net asset value ("NAV"). Sometimes, the prices of ETFs may vary significantly from the NAVs of the ETF's underlying securities.

Certain ETFs may not produce qualifying income for purposes of the "Income Requirement" (as defined below under the heading "Taxes") which must be met in order for the Fund to maintain its status as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"). If one or more ETFs generates more non-qualifying income for purposes of the "Income Requirement" than the Fund's portfolio management expects, it could cause the Fund to inadvertently fail the "Income Requirement" thereby causing the Fund to inadvertently fail to qualify as a regulated investment company under the Code.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security. Geopolitical and other risks, including war, terrorism, trade disputes, political or economic dysfunction within some nations, public health crises, and environmental disasters such as earthquakes, fire, and floods, may add to instability in world economies and volatility in markets generally. Changes in trade policies and international trade agreements could affect the economies of many countries in unpredictable ways. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Management Risk. The Fund is actively managed and may not meet its investment objective based on the Adviser's or Sub-Adviser's success or failure to implement investment strategies for the Fund.

Quantitative Security Selection Risk. Data for some underlying ETFs and issuers in which they invest may be less available and/or less current than data for issuers in other markets. The Sub-Adviser uses, and the underlying ETFs may use, a quantitative model, and their processes could be adversely affected if erroneous or outdated data is utilized. In addition, securities selected using a quantitative model could perform differently from the financial markets as a whole as a result of the characteristics used in the analysis, the weight placed on each characteristic and changes in the characteristic's historical trends. The factors used in such analyses may not be predictive of an underlying ETF's or a particular security's value and its effectiveness can change over time. These changes may not be reflected in the relevant quantitative model. There may also be technical issues with the construction and implementation of quantitative models (for example, software or other technology malfunctions, or programming inaccuracies). There can be no assurance that quantitative security selection will enable the Fund to achieve its investment objective.

FUND MANAGEMENT

Investment Adviser

Empowered Funds, LLC dba EA Advisers serves as the Fund's investment adviser (the "Adviser"). The Adviser is located at 19 East Eagle Road Havertown, PA 19083 and is wholly-owned by Alpha Architect, LLC. The Adviser is registered with the Securities and Exchange Commission ("SEC") under the Investment Advisers Act

of 1940 and provides investment advisory services to the Fund, other exchange-traded funds, and Alpha Architect, LLC, its parent company. The Adviser was founded in October 2013.

The Adviser is responsible for overseeing the management and business affairs of the Fund, and has discretion to purchase and sell securities in accordance with the Fund's objectives, policies and restrictions. The Adviser continuously reviews, supervises and administers the Fund's investment programs pursuant to the terms of an investment advisory agreement (the "Advisory Agreement") between the Trust and the Adviser. The Adviser is entitled to receive the following Advisory Fee: 0.39% (annual rate as a percentage of average daily net assets). During the fiscal year ended July 31, 2024, the net advisory fee paid to the Adviser was \$132,796.

The Adviser (or an affiliate of the Adviser) bears all of the Adviser's own costs associated with providing these advisory services and all expenses of the Fund, except for the fee payment under the Advisory Agreement, payments under the Fund's Rule 12b-1 Distribution and Service Plan (the "Plan"), brokerage expenses, acquired fund fees and expenses, taxes (including tax-related services), interest (including borrowing costs), litigation expense (including class action-related services) and other non-routine or extraordinary expenses. The Adviser has contractually agreed to waive all or a portion of its management fee to offset Acquired Fund Fees and Expenses. The fee waiver agreement will continue in effect for the life of the Fund or until terminated sooner only by agreement of the Adviser and the Fund's Board of Trustees. Pursuant to the fee waiver agreement the Adviser waived \$15,631 (or 0.04%) of its advisory fee for the fiscal year ended July 31, 2024.

The Advisory Agreement for the Fund provides that it may be terminated at any time, without the payment of any penalty, by the Board or, with respect to the Fund, by a majority of the outstanding shares of the Fund, on 60 days' written notice to the Adviser, and by the Adviser upon 60 days' written notice, and that it shall be automatically terminated if it is assigned.

Investment Sub-Adviser

The Adviser has retained Orcam Financial Group, LLC d/b/a Discipline Funds, an investment adviser registered with the SEC, to provide sub-advisory services for the Fund. The Sub-Adviser is organized as a Delaware limited liability company with its principal office located at 433 Union Street, Encinitas, CA and was founded in 2012. The Sub-Adviser offers investment management services to individual and institutional clients, as well as the Fund, and primarily allocates client assets among various ETFs, and individual debt and equity securities in accordance with their stated investment objectives. The Sub-Adviser is responsible for determining the investments for the Fund, subject to the overall supervision and oversight of the Adviser and the Board.

The Sub-Adviser performs its services as a non-discretionary sub-adviser, which means that the Sub-Adviser is not responsible for selecting brokers or placing the Fund's trades. Rather, the Sub-Adviser provides trade recommendations to the Adviser and, in turn, the Adviser is responsible for selecting brokers and placing the Fund's trades. It is anticipated that the Adviser will generally adhere to the Sub-Adviser's recommendations.

For its services, the Adviser pays the Sub-Adviser a fee, which is calculated daily and paid monthly, at an annual rate based on the Fund's average daily net assets as follows: 0.20% (annual rate as a percentage of average daily net assets).

Fund Sponsor

The Adviser has entered into a fund sponsorship agreement with the Sub-Adviser pursuant to which the Sub-Adviser is also the sponsor of the Fund ("Fund Sponsor"). Under this arrangement, the Fund Sponsor has agreed to provide financial support to the Fund (as described below) and, in turn, the Adviser has agreed to share with the Fund Sponsor a portion of profits, if any, generated by the Fund's Advisory Fee (also as described below). Every month, the Advisory Fee, which is a unitary management fee, is calculated and paid to the Adviser.

If the amount of the unitary management fee exceeds the Fund's operating expenses and the Adviser-retained amount, the Adviser pays the net total to the Fund Sponsor. The amount paid to the Fund Sponsor represents both the sub-advisory fee and any remaining profits from the Advisory Fee. During months where there are no profits or the funds are not sufficient to cover the entire sub-advisory fee, the sub-advisory fee is automatically waived.

If the amount of the unitary management fee is less than the Fund's operating expenses and the Adviser-retained amount, Fund Sponsor is obligated to reimburse the Adviser for the shortfall.

The Adviser-retained amount represents an agreed upon fee arrangement between the Adviser and Fund Sponsor. This arrangement calls for the Fund Sponsor to pay the Adviser a fee and reimburse the Adviser for certain Fund operating expenses it paid pursuant to the Advisory Agreement.

APPROVAL OF ADVISORY AGREEMENT & INVESTMENT SUB-ADVISORY AGREEMENT

A discussion regarding the basis for the Board's approval of the Advisory Agreement and the Sub-Advisory Agreement with respect to the Fund is available in the Fund's [annual report](#) dated July 31, 2022.

PORTFOLIO MANAGERS

The portfolio managers are jointly and primarily responsible for various functions related to portfolio management, including, but not limited to, making recommendations (or implementing) with respect to the following: investing cash inflows, implementing investment strategy, researching and reviewing investment strategy, and overseeing members of the portfolio management team with more limited responsibilities.

Cullen Roche has been the portfolio manager of the Fund since the Fund's inception September 2021. He is the Chief Investment Officer of Orcam Financial Group, LLC since 2012. Previously, he was a Wealth Management Advisor at Merrill Lynch. He has 19 years of experience in the financial services industry with a focus on portfolio management in the areas of global macro equities and interest rates. Mr. Roche graduated from Georgetown University with a focus in Finance. Mr. Roche provides his recommendations to Messrs. Wm. Joshua Russell and Richard Shaner, portfolio managers of the Adviser.

Wm. Joshua Russell, PhD, CFA has been a Senior Portfolio Manager with the Adviser since October 2022 and a portfolio manager of the Fund since January 2023. Prior to this, he was a Portfolio Manager at Carson Group where he was responsible for approximately \$1.7 billion in assets. He has also served in quant research roles as VP, Sr. Research Analyst at Franklin Templeton and Senior Quantitative Strategist at WisdomTree. Prior to entering the industry, Dr. Russell was a PhD candidate where he conducted research on large-scale distributed systems for the U.S. Army, the U.S. Air Force, and NASA. He earned a PhD in Electrical and Computer Engineering, a Masters in Economics, and a Masters in Electrical and Computer Engineering at the University of California, Santa Barbara. Dr. Russell earned a Bachelor of Science in Electrical Engineering from the University of Washington and is a CFA® Charterholder.

Richard Shaner has been portfolio manager of the Fund since the Fund's inception September 2021. Mr. Shaner has advised on trading and execution matters for the Adviser since January 2021, where he supports trading operations and assists in quantitative research. Prior to Mr. Shaner's tenure with the Adviser, Mr. Shaner executed various trading strategies for a private family office. Mr. Shaner has a B.Sc in Kinesiology and Applied Physiology from the University of Colorado. He is also a CFA® Charterholder.

The Fund's SAI provides additional information about the portfolio managers, including other accounts each manages, their ownership in the Fund, and compensation.

OTHER SERVICE PROVIDERS

Quasar Distributors, LLC ("Distributor") serves as the distributor of Creation Units (defined above) for the Fund on an agency basis. The Distributor does not maintain a secondary market in Shares.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, is the administrator, fund accountant, and transfer agent for the Fund.

U.S. Bank National Association is the custodian for the Fund.

Practus, LLP, 11300 Tomahawk Creek Parkway, Suite 310, Leawood, Kansas 66211, serves as legal counsel to the Trust.

Tait, Weller & Baker LLP, 50 South 16th Street, Suite 2900, Philadelphia, Pennsylvania 19102, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

THE EXCHANGE

Shares are not sponsored, endorsed or promoted by the Exchange. The Exchange is not responsible for, nor has it participated, in the determination of the timing of, prices of, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing or trading of Shares. Without limiting any of the foregoing, in no event shall the Exchange have any liability for any direct, indirect, special,

punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

BUYING AND SELLING FUND SHARES

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. Creation Units are generally issued and redeemed only in-kind for securities although a portion may be in cash.

Shares will trade on the secondary market, however, which is where most retail investors will buy and sell Shares. It is expected that only a limited number of institutional investors, called Authorized Participants or “APs,” will purchase and redeem Shares directly from the Fund. APs may acquire Shares directly from the Fund, and APs may tender their Shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units. Purchases and redemptions directly with the Fund must follow the Fund’s procedures, which are described in the SAI.

Except when aggregated in Creation Units, Shares are not redeemable with the Fund.

BUYING AND SELLING SHARES ON THE SECONDARY MARKET

Most investors will buy and sell Shares in secondary market transactions through brokers and, therefore, must have a brokerage account to buy and sell Shares. Shares can be bought or sold through your broker throughout the trading day like shares of any publicly traded issuer. The Trust does not impose any redemption fees or restrictions on redemptions of Shares in the secondary market. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered prices in the secondary market for Shares. The price at which you buy or sell Shares (*i.e.*, the market price) may be more or less than the NAV of the Shares. Unless imposed by your broker, there is no minimum dollar amount you must invest in the Fund and no minimum number of Shares you must buy.

Shares of the Fund are listed on the Exchange under the following symbol:

Fund	Trading Symbol
Discipline Fund ETF	DSCF

The Exchange is generally open Monday through Friday and is closed for weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Washington’s Birthday, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

For information about buying and selling Shares on the Exchange or in the secondary markets, please contact your broker or dealer.

Book Entry. Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”), or its nominee, will be the registered owner of all outstanding Shares and is recognized as the owner of all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely on the procedures of DTC and its participants. These procedures are the same as those that apply to any stocks that you hold in book entry or “street name” through your brokerage account. Your account information will be maintained by your broker, which will provide you with account statements, confirmations of your purchases and sales of Shares, and tax information. Your broker also will be responsible for distributing income dividends and capital gain distributions and for ensuring that you receive shareholder reports and other communications from the Fund.

Share Trading Prices. The trading prices of Shares may differ from the Fund’s daily NAV and can be affected by market forces of supply and demand for Shares, the prices of the Fund’s portfolio securities, economic conditions and other factors.

The Exchange through the facilities of the Consolidated Tape Association or another market information provider intends to disseminate the approximate value of the Fund’s portfolio every fifteen seconds during regular U.S. trading hours. This approximate value should not be viewed as a “real-time” update of the NAV of the Fund because the approximate value may not be calculated in the same manner as the NAV, which is

computed once a day. The quotations for certain investments may not be updated during U.S. trading hours if such holdings do not trade in the U.S., except such quotations may be updated to reflect currency fluctuations. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate values and makes no warranty as to the accuracy of these values.

Continuous Offering. The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirements and liability provisions of the Securities Act. For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the Investment Company Act of 1940, as amended (the “Investment Company Act”). As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

ACTIVE INVESTORS AND MARKET TIMING

The Board has evaluated the risks of market timing activities by the Fund’s shareholders. The Board noted that Shares can be purchased and redeemed directly from the Fund only in Creation Units by APs and that the vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), the Board noted that those trades do not cause the harmful effects (as previously noted) that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, the Board noted that those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund’s ability to achieve its investment objective, although in certain circumstances (*e.g.*, in conjunction with a reallocation of the Fund’s investments), such trades may benefit Fund shareholders by increasing the tax efficiency of the Fund. The Board also noted that direct trading by APs is critical to ensuring that Shares trade at or close to NAV. In addition, the Fund will impose transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by the Fund in effecting trades. Given this structure, the Board determined that it is not necessary to adopt policies and procedures to detect and deter market timing of Shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted the Plan pursuant to Rule 12b-1 under the Investment Company Act. Under the Plan, the Fund may be authorized to pay distribution fees of up to 0.25% of its average daily net assets each year to the Distributor and other firms that provide distribution and shareholder services (“Service Providers”). As of the date of this Prospectus, the maximum amount payable under the Plan is set at 0% until further action by the Board. In the event 12b-1 fees are charged, over time they would increase the cost of an investment in the Fund because they would be paid on an ongoing basis.

NET ASSET VALUE

The NAV of Shares is calculated each business day as of the close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m., Eastern time.

The Fund calculates its NAV per Share by:

- Taking the current market value of its total assets,
- Subtracting any liabilities, and
- Dividing that amount by the total number of Shares owned by shareholders.

If you buy or sell Shares on the secondary market, you will pay or receive the market price, which may be higher or lower than NAV. Your transaction will be priced at NAV only if you purchase or redeem your Shares in Creation Units.

Equity securities that are traded on a national securities exchange, except those listed on the NASDAQ Global Market[®] (“NASDAQ”) are valued at the last reported sale price on the exchange on which the security is principally traded. Securities traded on NASDAQ will be valued at the NASDAQ Official Closing Price (“NOCP”). If, on a particular day, an exchange-traded or NASDAQ security does not trade, then the most recent quoted bid for exchange traded or the mean between the most recent quoted bid and ask price for NASDAQ securities will be used. Equity securities that are not traded on a listed exchange are generally valued at the last sale price in the over-the-counter market. If a nonexchange traded security does not trade on a particular day, then the mean between the last quoted closing bid and asked price will be used.

Redeemable securities issued by open-end investment companies are valued at the investment company’s applicable net asset value, with the exception of exchange-traded open-end investment companies which are priced as equity securities.

If a market price is not readily available or is deemed not to reflect market value, the Fund will determine the price of the security held by the Fund based on a determination of the security’s fair value pursuant to policies and procedures approved by the Board.

To the extent the Fund holds securities that may trade infrequently, fair valuation may be used more frequently. Fair valuation may have the effect of reducing stale pricing arbitrage opportunities presented by the pricing of Shares. However, when the Fund uses fair valuation to price securities, it may value those securities higher or lower than another fund would have priced the security. Also, the use of fair valuation may cause the Shares’ NAV performance to diverge from the Shares’ market price and from the performance of various benchmarks used to compare the Fund’s performance because benchmarks generally do not use fair valuation techniques. Because of the judgment involved in fair valuation decisions, there can be no assurance that the value ascribed to a particular security is accurate.

FUND WEBSITE AND DISCLOSURE OF PORTFOLIO HOLDINGS

The Trust maintains a website for the Fund at <https://disciplinefunds.com/dscf/>. Among other things, the website includes this Prospectus and the SAI, the Fund’s [annual](#) and [semi-annual](#) reports to shareholders, financial information, holdings, and proxy information. The website shows the Fund’s daily NAV per share, market price, and premium or discount, each as of the prior business day. The website also shows the extent and frequency of the Fund’s premiums and discounts. Further, the website includes the Fund’s median bid-ask spread over the most recent thirty calendar days.

Each day the Fund is open for business, the Trust publicly disseminates the Fund’s full portfolio holdings as of the close of the previous day through its website at <https://disciplinefunds.com/dscf/>. A description of the Trust’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s SAI.

INVESTMENTS BY OTHER INVESTMENT COMPANIES

For purposes of the Investment Company Act, Shares are issued by a registered investment company and purchases of such Shares by registered investment companies and companies relying on Section 3(c)(1) or 3(c)(7) of the Investment Company Act are subject to the restrictions set forth in Section 12(d)(1) of the Investment Company Act, except as permitted by Rule 6c-11, Rule 12d1-4, or an exemptive order of the SEC. However, registered investment companies generally may not rely on Rule 12d1-4 to invest in an acquired fund beyond the limits set forth in Section 12(d)(1) if the acquired fund also invests significantly in other investment

companies in reliance on, and in compliance with the conditions set forth in, Rule 12d1-4. Accordingly, other investment companies will not be permitted to invest in the Discipline Fund ETF beyond the Section 12(d)(1) limits in reliance on Rule 12d1-4.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when:

- Your Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Dividends and Distributions

Dividends and Distributions. The Fund has qualified and intends to continue to qualify each year as a regulated investment company under the Internal Revenue Code of 1986, as amended. As a regulated investment company, the Fund generally pays no U.S. federal income tax on the income and gains it distributes to you. The Fund expects to declare and to distribute its net investment income, if any, to shareholders as dividends quarterly. The Fund will distribute net realized capital gains, if any, at least annually. The Fund may distribute such income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate U.S. federal excise or income taxes on the Fund. The amount of any distribution will vary, and there is no guarantee the Fund will pay either an income dividend or a capital gains distribution. Distributions may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Avoid "Buying a Dividend." At the time you purchase Shares of the Fund, the Fund's NAV may reflect undistributed income, undistributed capital gains, or net unrealized appreciation in value of portfolio securities held by the Fund. For taxable investors, a subsequent distribution to you of such amounts, although constituting a return of your investment, would be taxable. Buying Shares in the Fund just before it declares an income dividend or capital gains distribution is sometimes known as "buying a dividend."

Taxes

Tax Considerations. The Fund expects, based on its investment objective and strategies, that its distributions, if any, will be taxable as ordinary income, capital gains, or some combination of both. This is true whether you reinvest your distributions in additional Shares or receive them in cash. For U.S. federal income tax purposes, Fund distributions of short-term capital gains are taxable to you as ordinary income. Fund distributions of long-term capital gains are taxable to you as long-term capital gain no matter how long you have owned your Shares. A portion of income dividends reported by the Fund may be qualified dividend income eligible for taxation by certain shareholders at long-term capital gain rates provided certain holding period requirements are met.

Taxes on Sales of Shares. A sale or exchange of Shares is a taxable event and, accordingly, a capital gain or loss will generally be recognized. Currently, any capital gain or loss realized upon a sale of Shares generally is treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses may be limited.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Shares) of U.S. individuals, estates, and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds a threshold amount. This Medicare tax, if applicable, is reported by you on, and paid with, your U.S. federal income tax return.

Backup Withholding. By law, if you do not provide the Fund with your proper taxpayer identification number and certain required certifications, you may be subject to backup withholding on any distributions of income, capital gains or proceeds from the sale of your Shares. The Fund also must backup withhold if the Internal

Revenue Service (“IRS”) instructs it to do so. When backup withholding is required, the amount will be 24% of any distributions or proceeds paid.

State and Local Taxes. Fund distributions and gains from the sale or exchange of your Shares generally are subject to applicable state and local taxes.

Taxes on Purchase and Redemption of Creation Units. An AP who exchanges equity securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of purchase and the exchanger’s aggregate basis in the securities surrendered and the cash amount paid. A person who exchanges Creation Units for equity securities generally will recognize a gain or loss equal to the difference between the exchanger’s basis in the Creation Units and the aggregate market value of the securities received and the cash amount received. The IRS, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether the wash sale rules apply and when a loss might not be deductible.

Under current U.S. federal tax laws, any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short-term capital gain or loss if the Shares have been held for one year or less.

If the Fund redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

Foreign Tax Credits. If the Fund qualifies to pass through to you the tax benefits from foreign taxes it pays on its investments, and elects to do so, then any foreign taxes it pays on these investments may be passed through to you as a foreign tax credit.

Non-U.S. Investors. Non-U.S. investors may be subject to U.S. federal withholding tax at a 30% or lower treaty rate and are subject to special U.S. federal tax certification requirements to avoid backup withholding and claim any treaty benefits. An exemption from U.S. federal withholding tax is provided for capital gain dividends paid by the Fund from long-term capital gains, if any. However, interest-related dividends paid by the Fund from its qualified net interest income from U.S. sources and short-term capital gain dividends may be exempt from U.S. withholding provided the Fund makes certain designations and other requirements are met. Furthermore, notwithstanding such exemptions from U.S. federal withholding at the source, any such dividends and distributions of income and capital gains will be subject to U.S. federal backup withholding at a rate of 24% if you fail to properly certify that you are not a U.S. person. In addition, U.S. estate tax may apply to Shares of the Fund.

Other Reporting and Withholding Requirements. Under the Foreign Account Tax Compliance Act (FATCA), the Fund will be required to withhold a 30% tax on (i) income dividends paid by the Fund, and (ii) possibly in the future, certain capital gain distributions and the proceeds arising from the sale of Shares paid by the Fund, to certain foreign entities, referred to as foreign financial institutions or non-financial foreign entities, that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. The Fund may disclose the information that it receives from its shareholders to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of the Fund fails to provide the Fund with appropriate certifications or other documentation concerning its status under FATCA.

Possible Tax Law Changes. At the time that this prospectus is being prepared, various administrative and legislative changes to the U.S. federal tax laws are under consideration, but it is not possible at this time to determine whether any of these changes will be made or what the changes might entail.

This discussion of “Dividends, Distributions and Taxes” is not intended or written to be used as tax advice. Because everyone’s tax situation is unique, you should consult your tax professional about U.S. federal, state, local or foreign tax consequences before making an investment in the Fund.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the Fund's financial performance for the period of the Fund's operations. Certain information reflects financial results for a single Share. The total returns in the table represent the rate that an investor would have gained (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information in the table below prior to 2023 fiscal year was audited by the Fund's prior independent registered public accounting firm. Information for the remaining period in the table has been audited by Tait, Weller & Baker LLP, an independent registered public accounting firm, whose report, along with the Fund's financial statements, is included in the Fund's [Form N-CSR](#), which is available upon request.

- (1) Net investment income per share represents net investment income divided by the daily average shares of beneficial interest outstanding throughout the period.
- (2) All returns reflect reinvested dividends, if any, but do not reflect the impact of taxes. Total return for a period of less than one year is not annualized.
- (3) For periods of less than one year, these ratios are annualized.
- (4) Net expenses include effects of any reimbursement or recoupment.
- (5) Portfolio turnover is not annualized and is calculated without regard to short-term securities having a maturity of less than one year. Excludes the impact of in-kind transactions.
- (6) Commencement of operations.
