SARMAYA THEMATIC ETF

Fund Summary

INVESTMENT OBJECTIVE

The Sarmaya Thematic ETF (the “Fund”) seeks to achieve long-term capital appreciation.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.75%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ¹	0.00%
Acquired Fund Fees and Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.85%

¹ Other Expenses and Acquired Fund Fees and Expenses are estimated for the current fiscal year. “Acquired Fund Fees and Expenses” (“AFFE”) are indirect fees and expenses that the Fund incurs from investing in the shares of other investment companies.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then hold or sell all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:
\$87	\$271

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. As of the date of this Prospectus, the Fund has not yet commenced operations and portfolio turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund is an actively managed exchange-traded fund (“ETF”) that will invest primarily in domestic and foreign equity securities of companies considered by Sarmaya Partners, LLC, the sub-adviser to the Fund (the “Sub-Adviser”), to reflect an emerging or prevailing market theme. The Sub-Adviser defines “emerging or prevailing market theme” as market sectors, asset classes, or regions that are believed to be poised for future growth through the market cycle (i.e., the period of time between two major lows for a market).

The Sub-Adviser’s investment process is macro-focused, looking to generate value through its active management of the Fund’s portfolio across various emerging or prevailing market themes. The Sub-Adviser believes these market themes typically result from major macroeconomic shifts, new secular regimes (i.e., a new secular trend driven by fundamental changes in the economy), or eras of innovation and are typically born in areas of the market that have been underappreciated or ignored for a prolonged period, likely because of a structural consolidation from a prior theme high (i.e., the period that follows a market theme downtrend where companies begin to show signs of recovery). For example, the emerging and prevailing market theme during the 1990s involved the significant outperformance in technology/internet related companies.

The Sub-Adviser’s investment process begins by using proprietary analysis to identify an emerging or prevailing market theme using the macroeconomic and market framework of valuations, future growth prospects, economic growth outlook, monetary and fiscal policy outlook, and inflation or disinflation outlook. The Sub-Adviser generally expects a market theme to last approximately five to ten years. These themes are developed and driven by the direction and impact of the business cycle (i.e., the increase and decrease of economic activity over time), market, macroeconomic monetary and fiscal policy, and inflation or disinflationary forces. Based on the Sub-Adviser’s assessment of market conditions, the market themes will change over time, resulting in potentially significant shifts in the Fund’s portfolio holdings/allocations.

Once the macro investment theme has been identified, the Sub-Adviser then seeks to determine what, if any, sub-themes exist that have the potential to benefit from the macro theme. Companies identified by the Sub-Adviser as being economically involved in the macro theme and any correlated sub-themes will be evaluated for potential investment.

The Sub-Adviser will apply traditional fundamental analysis to identify companies operating within these themes that it believes are positioned to perform well. This process involves a review of several factors, including, but not limited to, a company's price-to-earnings ratio, earnings per share, profit margin, return on equity, relative value to peers, and debt-equity ratio, and is designed to identify companies that are trading below their intrinsic value (*i.e.*, the company's value as determined by the Sub-Adviser) and/or may be currently out of favor with investors. The Sub-Adviser also searches for companies within these themes that offer earnings growth, opportunity for price/earnings multiple expansion, and the best combination of quality criteria such as strong market share, good management, high barriers to entry, and high return on capital.

When selecting investments for the Fund, the Sub-Adviser seeks to balance the Fund's exposure to the largest, highest quality companies (*i.e.*, low beta stocks) with the smaller, higher beta companies believed to offer strong return potential. Beta is a measure of a company's volatility relative to the market. High beta stocks are generally considered to be riskier than low beta stocks.

The Sub-Adviser will seek to identify 25 to 35 holdings for the Fund, which may include investments in other exchange-traded products ("ETPs") that provide either exposure to the desired asset class, sector, region and/or country or provide a potential hedge against certain market risks (*e.g.*, inflation) identified by the Sub-Adviser. The Fund's investments in ETPs may include ETFs, exchange-traded commodity trusts, and exchange-traded notes ("ETNs"). The Fund's portfolio generally will consist of domestic and foreign, including emerging market, equity securities across all market capitalizations (small, mid, and large) and ETPs that provide such exposure.

The Sub-Adviser expects the Fund's exposure to commodities will be through investments in other ETPs. The Sub-Adviser's investment selection criteria for other ETPs includes a review of its structure, relative performance among its peer group and the broader market (*e.g.*, the S&P 500 Index), total operating expense ratio, assets under management, and liquidity. For more information on the Fund's investments in ETPs, please see the section - ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT OBJECTIVE AND PRINCIPAL INVESTMENT STRATEGIES. The Fund's investments in foreign equity securities will be through depositary receipts (*e.g.*, American Depositary Receipts (ADRs)) and/or ETFs that provide the desired foreign equity exposure. The Fund has no limit on the amount of assets it may invest in foreign securities. The decision to invest in a foreign security will be based on the Sub-Adviser's investment analysis, as described above.

At times, the Fund may take short positions in one or more asset classes, sectors, or regions through its investment in inverse ETFs. For example, the Sub-Adviser may invest in inverse ETFs when it believes one or more asset classes, sectors, or regions are out of favor to gain short exposure to such asset class, sector, or region. The Fund will not short securities directly or invest in leveraged inverse ETFs.

While it is anticipated that the Fund will invest across various industries, certain sectors may be overweight compared to others because the Sub-Adviser seeks the best investment opportunities within the macro and correlated sub-themes. The Sub-Adviser generally seeks to sell an investment when it believes that the investment's value has been fully reflected in a higher valuation by the market or when a negative fundamental development occurs at the company, sector, or regional level that could impact future growth. In addition, when the Sub-Adviser's macro view of the market begins to change it will begin repositioning the Fund's portfolio to the next emerging or prevailing market theme.

Because the Fund intends to operate as a "non-diversified" fund, that means it can invest in fewer securities at any one time than a diversified fund and can invest more of its assets in securities of a single issuer than a diversified fund. The Fund may invest a significant percentage of its assets in one or more ETFs.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading "*Additional Information About the Fund's Principal Investment Risks.*"

Large-Capitalization Companies Risk. Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Mid-Capitalization Companies Risk. Investing in securities of mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. Often mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

Small-Capitalization Companies Risk. Investing in securities of small-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. Small-capitalization companies often have less predictable earnings, more limited product lines, markets, distribution channels and financial resources, and the management of such companies may be dependent upon one or few people. Price movements of small-capitalization companies may be more volatile than mid-capitalization and large-capitalization companies.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security. Geopolitical and other risks, including war, terrorism, trade disputes, political or economic dysfunction within some nations, public health crises, and environmental disasters such as earthquakes, fire, and floods, may add to instability in world economies and volatility in markets generally. Changes in trade policies and international trade agreements could affect the economies of many countries in unpredictable ways. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Non-Diversification Risk. Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of the Shares and greater risk of loss.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Thematic Risk. The Fund's Sub-Adviser employs a "thematic" style of investing which means the Fund will invest primarily in securities of issuers that are considered economically involved with the macro and correlated themes. In that case, the Fund may forego some market opportunities available to funds that do not follow the particular themes established by the Sub-Adviser. Companies operating within Sub-Adviser's selected investment theme may be out of favor in particular market cycles and perform less well than the market as a whole.

Commodities Risk. Commodities include, among other things, energy products, agricultural products, industrial metals, precious metals and livestock. The commodities markets may fluctuate widely based on a variety of factors, including overall market movements, economic events and policies, changes in interest rates or inflation rates, changes in monetary and exchange control programs, war, acts of terrorism, natural disasters and technological developments. Variables such as disease, drought, floods, weather, trade, embargoes, tariffs and other political events, in particular, may have a larger impact on commodity prices than on traditional securities. These additional variables may create additional investment risks that subject an ETF's/ETP's investments to greater volatility than investments in traditional securities. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Because certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers, political, economic and supply-related events in such countries could have a disproportionate impact on the prices of such commodities. These factors may affect the value of an ETF/ETP in varying ways, and different factors may cause the value and the volatility of an ETF/ETP to move in inconsistent directions at inconsistent rates.

Commodity ETF Risk. Commodity ETFs are generally not registered as investment companies for purposes of U.S. federal securities laws, and are not subject to regulation by the SEC as investment companies, although some commodity ETFs may be registered investment companies. Consequently, the owners of a non-investment company commodity ETF do not have the regulatory protections provided to investors in investment companies. For example, the provisions of the 1940 Act that limit transactions with affiliates, prohibit the suspension of redemptions (except under certain limited circumstances) or limit sales loads do not apply to commodity ETFs. Commodity ETFs do not hold or trade in commodity futures contracts regulated by the Commodity Exchange Act ("CEA"), as administered by the Commodity Futures Trading Commission ("CFTC"). Furthermore, commodity ETFs are not a commodity pool for purposes of the CEA, and their sponsors are not subject to regulation by the CFTC as a commodity pool operator, or a commodity trading adviser. Consequently, the owner of a commodity ETF does not have the regulatory protections provided to investors in CEA regulated instruments or commodity pools, the sponsor is not subject to registration as a commodity pool operator, and the owners of the commodity ETF do not receive a disclosure document or certified annual report required to be delivered by a commodity pool operator. To the extent that the Fund invests in a commodity ETF, the Fund may be subject to duplicative advisory and administrative fees.

Commodity ETFs are publicly traded partnerships, not regulated investment companies. Because of the 25% limit on ownership of publicly traded partnerships, the Fund will have to monitor its holdings in commodity ETFs so that such holdings will not constitute 25% of its assets at the close of any quarter.

Commodities Tax Risk. In order for the Fund to qualify as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code, it must derive at least 90% of its gross income each taxable year from “qualifying income”. Income and gains from certain commodity-linked instruments do not constitute “qualifying income” to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which the Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute “qualifying income” to a RIC. If the IRS publishes an adverse determination relating to the treatment of such income and gain, the Fund would likely need to significantly change their investment strategies in order to qualify as a RIC under the Internal Revenue Code.

Metals and Mining Companies Risk. Metals and mining companies can be significantly affected by events relating to international political and economic developments, energy conservation, the success of exploration projects, commodity prices, and tax and other government regulations. Investments in metals and mining companies may be speculative and may be subject to greater price volatility than investments in other types of companies. Risks of metals and mining investments include: changes in international monetary policies or economic and political conditions that can affect the supply of precious metals and consequently the value of metals and mining company investments; the United States or foreign governments may pass laws or regulations limiting metals investments for strategic or other policy reasons; and increased environmental or labor costs may depress the value of metals and mining investments.

Gold Risk. The Fund may, from time to time, invest in underlying exchange-traded products that, in turn, invest primarily in the gold industry. The prices of gold and gold operation companies are affected by the price of gold as well as other prevailing market conditions. These prices may be volatile, fluctuating substantially over short periods of time. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the price of gold may be adversely affected.

Allocation Risk. The Fund’s performance and risks depend in part on the Sub-Adviser’s skill in selecting and weighting the Fund’s investments. The Sub-Adviser’s evaluations and assumptions regarding the Fund’s exposure to common stocks and/or ETFs, domestic and/or international markets, may differ from actual market conditions.

Risk of Investing in Other ETFs. Because the Fund may invest in other ETFs, the Fund’s investment performance is impacted by the investment performance of the selected underlying ETFs. An investment in the Fund is subject to the risks associated with the ETFs that then-currently comprise the Fund’s portfolio. At times, certain of the segments of the market represented by the Fund’s underlying ETFs may be out of favor and underperform other segments. The Fund will indirectly pay a proportional share of the expenses of the underlying ETFs in which it invests (including operating expenses and management fees), which are identified in the fee schedule above as “Acquired Fund Fees and Expenses.”

Inverse ETF Risk. Inverse ETFs expose the Fund to all of the risks that traditional ETFs present (see “Risks of Investing in Other ETFs” above). Inverse ETFs seek to provide investment results that match a negative (*i.e.*, the opposite) of the performance of an underlying index. Inverse ETFs rely to some degree on derivatives to achieve their objectives and, thus, the Fund is indirectly exposed to derivatives risk through its investments in these ETFs. Further, investments in inverse ETFs are subject to the risk that the performance of the ETF will not correlate with the underlying index as intended. Inverse ETFs often “reset” daily, meaning that they are designed to achieve their stated objectives on a daily basis. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance (or inverse of the performance) of their underlying index or benchmark during the same period of time. This effect can be magnified in volatile markets. Consequently, these investment vehicles may be extremely volatile and can potentially expose the Fund to complete loss of its investment.

Exchange-Traded Notes Risk. ETNs are unsecured, unsubordinated debt securities and an investment in an ETN exposes the Fund to the risk that an ETN’s issuer may be unable to pay. In addition, the Fund will bear its proportionate share of the fees and expenses of the ETN, which may cause the Fund’s operating expenses to be higher and its performance to be lower.

Debt Securities Risks.

- **Credit Risk.** The financial condition of an issuer of a debt security or other instrument may cause such issuer to default, become unable to pay interest or principal due or otherwise fail to honor its obligations or cause such issuer to be perceived (whether by market participants, rating agencies, pricing services or otherwise) as being in such situations. The value of an investment in the Fund may change quickly and without warning in response to issuer defaults, changes in the credit ratings of the Fund’s portfolio investments and/or perceptions related thereto.
- **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Interest rate changes can be sudden and unpredictable, and the Fund may lose money as a result of movements in interest rates. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates.
- **Prepayment Risk.** The risk that the issuer of a debt security repays all or a portion of the principal prior to the security’s maturity. In times of declining interest rates, there is a greater likelihood that the Fund’s higher yielding securities will be pre-

paid with the Fund being unable to reinvest the proceeds in an investment with as favorable a yield. Prepayments can therefore result in lower yields to shareholders of the Fund.

- *Extension Risk.* An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.
- *Issuer-Specific Changes.* Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security's or instrument's credit quality or value. Entities providing credit support or a maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.

Foreign Investment Risk. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in or exposures to foreign securities are subject to special risks, including risks associated with foreign securities generally. Those special risks may arise due to differences in information available about issuers of securities and investor protection standards applicable in other jurisdictions; capital controls risks, including the risk of a foreign jurisdiction imposing restrictions on the ability to repatriate or transfer currency or other assets; currency risks; political, diplomatic and economic risks; regulatory risks; and foreign market and trading risks, including the costs of trading and risks of settlement in foreign jurisdictions.

Depository Receipts. Depository receipts are generally subject to the same risks as the foreign securities that they evidence or into which they may be converted. In addition, the underlying issuers of certain depository receipts, particularly unsponsored or unregistered depository receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Depository receipts that are not sponsored by the issuer may be less liquid and there may be less readily available public information about the issuer.

Developed Countries Risk. The Fund's investment in developed country issuers may subject the Fund to legal, regulatory, political, currency, security, economic and other risks associated with developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. Certain developed countries have experienced security concerns, such as war, terrorism, and strained international relations. Incidents involving a country's or region's security may cause uncertainty in its markets and may adversely affect its economy and the Fund's investments. In addition, developed countries may be adversely impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens, and the price or availability of certain commodities.

Emerging Markets Risk. Many emerging market countries have a history of, and continue to experience serious, and potentially continuing, economic and political problems. Stock markets in many emerging market countries are relatively small, expensive to trade in, and generally have higher risks than those in developed markets. Securities in emerging markets also may be less liquid than those in developed markets and foreigners are often limited in their ability to invest in, and withdraw assets from, these markets. Additional restrictions may be imposed under other conditions.

Currency Risk. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if a currency of a non-U.S. market in which the Fund has exposure to depreciates against the U.S. dollar or if there are delays or limits on repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund's NAV may change quickly and without warning.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the Cboe BZX Exchange, Inc. (the "Exchange") or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares.

- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund's trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size).

Sector Risk. To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.

- *Energy Sector Risk.* The market value of securities in the energy sector may decline for many reasons including, fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events that result in injury, loss of life or property, pollution or other environmental damage claims, terrorist threats or attacks, among other factors. Markets for various energy-related commodities can have significant volatility and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and may incur significant amounts of debt, to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may adversely affect companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure. Issuers in the energy sector may also be impacted by changing investor and consumer preferences arising from the sector's potential exposure to sustainability and environmental concerns.

The profitability of oil and gas companies is related to worldwide energy prices, exploration costs, and production spending. Oil and gas companies may be at risk for environmental damage claims and other types of litigation, as well as negative publicity and perception. Oil and gas companies may be adversely affected by natural disasters or other catastrophes, changes in exchange rates, interest rates, changes in prices for competitive energy services, economic conditions, tax treatment, government regulation and intervention, and unfavorable events in the regions where companies operate (e.g., expropriation, nationalization, confiscation of assets and property or imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). As a result, the value of these companies may fluctuate widely. Oil and gas companies may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks. Any of these factors could result in a material adverse impact on the Fund's securities and the performance of the Fund.

- *Industrial Sector Risk.* Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Transportation securities, a component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.
- *Materials Sector Risk.* Many materials companies are significantly affected by the level and volatility of commodity prices, exchange rates, import controls, worldwide competition, environmental policies and consumer demand. At times, worldwide production of industrial materials has exceeded demand as a result of over-building or economic downturns, leading to poor investment returns or losses. Other risks may include liabilities for environmental damage and general civil liabilities, depletion of resources, and mandated expenditures for safety and pollution control. The materials sector may also be affected by economic cycles, technical progress, labor relations, and government regulations.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Adviser's, Sub-Adviser's, or portfolio managers' success or failure to implement investment strategies for the Fund. The success of the Fund's investment program depends largely on the investment techniques and risk analyses applied by the Adviser, Sub-Adviser, and the portfolio managers and the skill of the Adviser, Sub-Adviser, and/or portfolio managers in evaluating, selecting, and monitoring the Fund's assets. The Fund could experience losses (realized and unrealized) if the judgment of the Adviser, Sub-Adviser, or portfolio managers about markets or sectors or the attractiveness of particular investments made for the Fund's portfolio prove to be incorrect. It is possible the investment techniques and risk analyses employed on behalf of the Fund will not produce the desired results. Absent unusual circumstances (e.g., the Adviser determines a different security has higher liquidity but offers a

similar investment profile as a recommended security), the Adviser will generally follow the Sub-Adviser's investment recommendations to buy, hold, and sell securities and financial instruments.

New Sub-Adviser Risk. The Sub-Adviser has no experience managing ETFs, which may limit the Sub-Adviser's effectiveness. However, the Fund's portfolio manager does have prior experience managing ETFs, which may alleviate this risk.

New Fund Risk. The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

PERFORMANCE

Performance information is not provided below because the Fund has not yet been in operation for one full calendar year. When provided, the information will provide some indication of the risks of investing in the Fund by showing how the Fund's average annual returns compare with a broad measure of market performance. Past performance does not necessarily indicate how the Fund will perform in the future. Updated performance information will be available at www.sarmayaetf.com.

INVESTMENT ADVISER

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the "Adviser")

Investment Sub-Adviser: Sarmaya Partners, LLC

PORTFOLIO MANAGER

Wasif Latif, President and Chief Investment Officer of the Sub-Adviser, is the portfolio manager and the person primarily responsible for the day-to-day management of the Fund.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis only in large blocks of Shares known as "Creation Units," and only APs (typically, broker-dealers) may purchase or redeem Creation Units. Creation Units generally are issued and redeemed 'in-kind' for securities and partially in cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Once created, individual Shares generally trade in the secondary market at market prices that change throughout the day. Market prices of Shares may be greater or less than their NAV. **Except when aggregated in Creation Units, the Fund's shares are not redeemable securities.**

TAX INFORMATION

The Fund's distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an Individual Retirement Account ("IRA") or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

HOW IS THE FUND DIFFERENT FROM A MUTUAL FUND?

Redeemability. Mutual fund shares may be bought from, and redeemed with, the issuing fund for cash at NAV typically calculated once at the end of the business day. Shares of the Fund, by contrast, cannot be purchased from or redeemed with the Fund except by or through APs (typically, broker-dealers), and then principally for an in-kind basket of securities (and a limited cash amount). In addition, the Fund issues and redeems Shares on a continuous basis only in large blocks of Shares called “Creation Units.”

Exchange Listing. Unlike mutual fund shares, Shares will be listed for trading on the Exchange. Investors can purchase and sell Shares on the secondary market through a broker. Investors purchasing Shares in the secondary market through a brokerage account or with the assistance of a broker may be subject to brokerage commissions and charges. Secondary-market transactions do not occur at NAV, but at market prices that change throughout the day, based on the supply of, and demand for, Shares and on changes in the prices of the Fund’s portfolio holdings. The market price of Shares may differ from the NAV of the Fund. The difference between market price of Shares and the NAV of the Fund is called a premium when the market price is above the reported NAV and called a discount when the market price is below the reported NAV, and the difference is expected to be small most of the time, though it may be significant, especially in times of extreme market volatility.

Transparency. The Fund’s portfolio holdings are disclosed on its website daily after the close of trading on the Exchange and prior to the opening of trading on the Exchange the following day. A description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s Statement of Additional Information (“SAI”).

Premium/Discount Information. Information about the premiums and discounts at which Shares have traded is available at www.sarmayaetf.com.

ADDITIONAL INFORMATION ABOUT THE FUND’S INVESTMENT OBJECTIVE AND PRINCIPAL INVESTMENT STRATEGIES

The Fund’s investment objective is to seek to achieve long-term capital appreciation.

The Fund’s investment objective is a non-fundamental investment policy and may be changed without a vote of shareholders upon prior written notice to shareholders.

The Fund is an actively managed ETF that will invest primarily in domestic and foreign equity securities of companies considered by the Sub-Adviser to reflect an emerging or prevailing market theme. The Sub-Adviser defines “emerging or prevailing market theme” as market sectors, asset classes, or regions that are believed to be poised for future growth through the market cycle (i.e., the period of time between two major lows for a market).

The Sub-Adviser’s investment process is macro-focused, looking to generate value through its active management of the Fund’s portfolio across various emerging or prevailing market themes. The Sub-Adviser believes these market themes typically result from major macroeconomic shifts, new secular regimes, or eras of innovation and are typically born in areas of the market that have been underappreciated or ignored for a prolonged period, likely because of a structural consolidation from a prior theme high. Examples of such themes include high inflation in the 1970s, which led to a period of outperformance of gold and oil-related investments; a period of outperformance by Japanese-related investments in the 1980s; and a period of significant outperformance in technology/internet-related companies in the 1990s. The emerging or prevailing market themes will change over time based on the Sub-Adviser’s assessment of market conditions. The Sub-Adviser generally expects a market theme to last approximately five to ten years.

The Fund may invest globally in any asset class or security and may at times have significant exposure to a single asset class. The Fund’s investments may include exchange-traded products that provide the desired investment exposures. The Fund may focus its investments in particular asset classes, sectors, regions, or countries, and in companies of any market capitalization, which allocations may change over time.

Exchange-Traded Products. The Fund may invest in one or more types of ETPs, which may include ETFs, exchange-traded commodity trusts, and ETNs.

Generally, the Fund’s investment in an ETP will subject the Fund to all of the risks associated with the assets or holdings of such ETP, as well as the general risks of investing in an ETP. For example, the Fund may invest in new ETPs or ETPs that have not yet established a deep trading market at the time of investment. Shares of such ETPs may experience limited trading volume and less liquidity, which may increase the spread (the difference between bid price and ask price) associated with the ETP’s share price. In addition, the market price of ETP shares may be more (i.e., a premium) or less (i.e., a discount) than the net asset value of the ETP shares and may not correlate to the market price of the ETP’s reference asset.

Exchange-Traded Funds. The Fund may invest in ETFs. ETFs are investment companies regulated pursuant to the 1940 Act and registered with the SEC that trade like stocks on a securities exchange at market prices rather than NAV. As a result, ETF

shares may trade at a price greater than NAV (premium) or less than NAV (discount). When the Fund invests in an ETF it indirectly bears the fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. Investments in ETFs also are subject to brokerage and other trading costs that could result in greater expenses for the Fund.

Exchange-Traded Commodity Trusts. The Fund may invest in exchange-traded commodity trusts. An exchange-traded commodity trust is a pooled investment vehicle that invests in physical commodities or commodity futures, and issues shares that trade on a securities exchange at a discount or premium to the value of the trust's holdings. Investments in exchange-traded commodity trusts also are subject to brokerage and other trading costs, which could result in greater expenses to the Fund. Exchange-traded commodity trusts are not investment companies registered under the 1940 Act. As a result, in connection with any such investments, the Fund will not have the protections associated with ownership of shares in an investment company registered under the 1940 Act. Exchange-traded commodity trusts generally are registered with the CFTC and subject to regulation pursuant to the CEA. Direct investments in exchange-traded commodity trusts, like investments in other commodities, may increase the risk that the Fund may not qualify as RIC under the Code. If the Fund fails to qualify as a RIC, the Fund will be subject to tax, which will reduce returns to shareholders. Such a failure will also alter the treatment of distributions to its shareholders.

Exchange-Traded Notes. The Fund may invest in ETNs. ETNs generally are senior, unsecured, unsubordinated debt securities issued by a sponsor, such as an investment bank. ETNs are traded on exchanges and the returns are linked to the performance of market indexes. In addition to trading ETNs on exchanges, investors may redeem ETNs directly with the issuer on a periodic basis, typically in a minimum amount of 50,000 units, or hold the ETNs until maturity. The value of an ETN may be influenced by time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying market, changes in the applicable interest rates, and economic, legal, political or geographic events that affect the referenced market. Because ETNs are debt securities, they are subject to credit risk. If the issuer has financial difficulties or goes bankrupt, the Fund may not receive the return it was promised. If a rating agency lowers an issuer's credit rating, the value of the ETN may decline and a lower credit rating reflects a greater risk that the issuer will default on its obligation. There may be restrictions on the Fund's right to redeem its investment in an ETN. There are no periodic interest payments for ETNs, and principal is not protected. The Fund's decision to sell its ETN holdings may be limited by the availability of a secondary market.

Temporary Defensive Positions. From time to time, the Fund may take temporary defensive positions that are inconsistent with its principal investment strategies in attempting to respond to adverse market, economic, political, or other conditions. In those instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; money market mutual funds; investment grade fixed income securities; repurchase agreements; commercial paper; cash equivalents; and exchange-traded investment vehicles that principally invest in the foregoing instruments. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective.

ADDITIONAL INFORMATION ABOUT THE FUND'S PRINCIPAL INVESTMENT RISKS

The following information is in addition to, and should be read along with, the description of the Fund's principal investment risks in the sections titled "Fund Summary—Principal Investment Risks" above.

Large-Capitalization Companies Risk. Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Mid-Capitalization Companies Risk. The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of larger-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some of these companies have limited product lines, markets, and financial and managerial resources and tend to concentrate on fewer geographical markets relative to larger capitalization companies.

Small-Capitalization Companies Risk. Investing in securities of small-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. Small-capitalization companies often have less predictable earnings, more limited product lines, markets, distribution channels and financial resources, and the management of such companies may be dependent upon one or few people. Price movements of small-capitalization companies may be more volatile than mid-capitalization and large-capitalization companies.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security. Geopolitical and other risks, including war, terrorism, trade disputes, political or economic dysfunction within some

nations, public health crises, and environmental disasters such as earthquakes, fire, and floods, may add to instability in world economies and volatility in markets generally. Changes in trade policies and international trade agreements could affect the economies of many countries in unpredictable ways. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Non-Diversification Risk. Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of the Shares and greater risk of loss.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. Different types of equity securities tend to go through cycles of outperformance and underperformance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally. Recent turbulence in financial markets and reduced liquidity in credit and fixed income markets may negatively affect many issuers worldwide, which may have an adverse effect on the Fund.

Thematic Risk. The Fund's Sub-Adviser employs a "thematic" style of investing which means the Fund will invest primarily in securities of issuers that are considered economically involved with the macro and correlated themes. In that case, the Fund may forego some market opportunities available to funds that do not follow the particular themes established by the Sub-Adviser. Companies operating within Sub-Adviser's selected investment theme may be out of favor in particular market cycles and perform less well than the market as a whole.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Commodities Risk. Commodities include, among other things, energy products, agricultural products, industrial metals, precious metals and livestock. The commodities markets may fluctuate widely based on a variety of factors, including overall market movements, economic events and policies, changes in interest rates or inflation rates, changes in monetary and exchange control programs, war, acts of terrorism, natural disasters and technological developments. Variables such as disease, drought, floods, weather, trade, embargoes, tariffs and other political events, in particular, may have a larger impact on commodity prices than on traditional securities. These additional variables may create additional investment risks that subject an ETF's/ETP's investments to greater volatility than investments in traditional securities. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Because certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers, political, economic and supply-related events in such countries could have a disproportionate impact on the prices of such commodities. These factors may affect the value of an ETF/ETP in varying ways, and different factors may cause the value and the volatility of an ETF/ETP to move in inconsistent directions at inconsistent rates.

Commodity ETF Risk. Commodity ETFs are generally not registered as investment companies for purposes of U.S. federal securities laws, and are not subject to regulation by the SEC as investment companies, although some commodity ETFs may be registered investment companies. Consequently, the owners of a non-investment company commodity ETF do not have the regulatory protections provided to investors in investment companies. For example, the provisions of the 1940 Act that limit transactions with affiliates, prohibit the suspension of redemptions (except under certain limited circumstances) or limit sales loads do not apply to commodity ETFs. Commodity ETFs do not hold or trade in commodity futures contracts regulated by the Commodity Exchange Act ("CEA"), as administered by the Commodity Futures Trading Commission ("CFTC"). Furthermore, commodity ETFs are not a commodity pool for purposes of the CEA, and their sponsors are not subject to regulation by the CFTC as a commodity pool operator, or a commodity trading adviser. Consequently, the owner of a commodity ETF does not have the regulatory protections provided to investors in CEA regulated instruments or commodity pools, the sponsor is not subject to registration as a commodity pool operator, and the owners of the commodity ETF do not receive a disclosure document or certified annual report required to be delivered by a commodity pool operator. To the extent that the Fund invests in a commodity ETF, the Fund may be subject to duplicative advisory and administrative fees.

Commodity ETFs are publicly traded partnerships, not regulated investment companies. Because of the 25% limit on ownership of publicly traded partnerships, the Fund will have to monitor its holdings in commodity ETFs so that such holdings will not constitute 25% of its assets at the close of any quarter.

Commodities Tax Risk. In order for the Fund to qualify as a regulated investment company ("RIC") under Subchapter M of the Internal Revenue Code, it must derive at least 90% of its gross income each taxable year from "qualifying income". Income and gains from certain commodity-linked instruments do not constitute "qualifying income" to a RIC for purposes of the 90% gross

income test. The tax treatment of some other commodity-linked instruments in which the Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute “qualifying income” to a RIC. If the IRS publishes an adverse determination relating to the treatment of such income and gain, the Fund would likely need to significantly change their investment strategies in order to qualify as a RIC under the Internal Revenue Code.

Metals and Mining Companies Risk. Metals and mining companies can be significantly affected by events relating to international political and economic developments, energy conservation, the success of exploration projects, commodity prices, and tax and other government regulations. Investments in metals and mining companies may be speculative and may be subject to greater price volatility than investments in other types of companies. Risks of metals and mining investments include: changes in international monetary policies or economic and political conditions that can affect the supply of precious metals and consequently the value of metals and mining company investments; the United States or foreign governments may pass laws or regulations limiting metals investments for strategic or other policy reasons; and increased environmental or labor costs may depress the value of metals and mining investments.

Gold Risk. The Fund may, from time to time, invest in underlying exchange-traded products that, in turn, invest primarily in the gold industry. The prices of gold and gold operation companies are affected by the price of gold as well as other prevailing market conditions. These prices may be volatile, fluctuating substantially over short periods of time. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the price of gold may be adversely affected.

Allocation Risk. The Fund’s performance and risks depend in part on the Sub-Adviser’s skill in selecting and weighting the Fund’s investments. The Sub-Adviser’s evaluations and assumptions regarding the Fund’s exposure to common stocks and/or ETFs, domestic and/or international markets, may differ from actual market conditions.

Inverse ETF Risk. Inverse ETFs expose the Fund to all of the risks that traditional ETFs present (see “Risks of Investing in Other ETFs” above). Inverse ETFs seek to provide investment results that match a negative (*i.e.*, the opposite) of the performance of an underlying index. Inverse ETFs rely to some degree on derivatives to achieve their objectives and, thus, the Fund is indirectly exposed to derivatives risk through its investments in these ETFs. Further, investments in inverse ETFs are subject to the risk that the performance of the ETF will not correlate with the underlying index as intended. Inverse ETFs often “reset” daily, meaning that they are designed to achieve their stated objectives on a daily basis. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance (or inverse of the performance) of their underlying index or benchmark during the same period of time. This effect can be magnified in volatile markets. Consequently, these investment vehicles may be extremely volatile and can potentially expose the Fund to complete loss of its investment.

Exchange-Traded Notes Risk. ETNs are unsecured, unsubordinated debt securities and an investment in an ETN exposes the Fund to the risk that an ETN’s issuer may be unable to pay. In addition, the Fund will bear its proportionate share of the fees and expenses of the ETN, which may cause the Fund’s operating expenses to be higher and its performance to be lower.

Debt Securities Risks.

- **Credit Risk.** The financial condition of an issuer of a debt security or other instrument may cause such issuer to default, become unable to pay interest or principal due or otherwise fail to honor its obligations or cause such issuer to be perceived (whether by market participants, rating agencies, pricing services or otherwise) as being in such situations. The value of an investment in the Fund may change quickly and without warning in response to issuer defaults, changes in the credit ratings of the Fund’s portfolio investments and/or perceptions related thereto.
- **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Interest rate changes can be sudden and unpredictable, and the Fund may lose money as a result of movements in interest rates. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates.
- **Prepayment Risk.** The risk that the issuer of a debt security repays all or a portion of the principal prior to the security’s maturity. In times of declining interest rates, there is a greater likelihood that the Fund’s higher yielding securities will be pre-paid with the Fund being unable to reinvest the proceeds in an investment with as favorable a yield. Prepayments can therefore result in lower yields to shareholders of the Fund.
- **Extension Risk.** An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.
- **Issuer-Specific Changes.** Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security’s or instrument’s credit quality or value. Entities providing credit support or a maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.

Foreign Investment Risk. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in or exposures to foreign securities are subject to special risks, including risks associated with foreign securities generally. Those special risks may arise due to differences in information available about issuers of securities and investor protection standards applicable in other jurisdictions; capital controls risks, including the risk of a foreign jurisdiction imposing restrictions on the ability to repatriate or transfer currency or other assets; currency risks; political, diplomatic and economic risks; regulatory risks; and foreign market and trading risks, including the costs of trading and risks of settlement in foreign jurisdictions.

Depository Receipts. Depository receipts are generally subject to the same risks as the foreign securities that they evidence or into which they may be converted. In addition, the underlying issuers of certain depository receipts, particularly unsponsored or unregistered depository receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Depository receipts that are not sponsored by the issuer may be less liquid and there may be less readily available public information about the issuer.

Developed Countries Risk. The Fund's investment in developed country issuers may subject the Fund to legal, regulatory, political, currency, security, economic and other risks associated with developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. Certain developed countries have experienced security concerns, such as war, terrorism, and strained international relations. Incidents involving a country's or region's security may cause uncertainty in its markets and may adversely affect its economy and the Fund's investments. In addition, developed countries may be adversely impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens, and the price or availability of certain commodities.

Emerging Markets Risk. Many emerging market countries have a history of, and continue to experience serious, and potentially continuing, economic and political problems. Stock markets in many emerging market countries are relatively small, expensive to trade in, and generally have higher risks than those in developed markets. Securities in emerging markets also may be less liquid than those in developed markets and foreigners are often limited in their ability to invest in, and withdraw assets from, these markets. Additional restrictions may be imposed under other conditions.

Currency Risk. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if a currency of a non-U.S. market in which the Fund has exposure to depreciates against the U.S. dollar or if there are delays or limits on repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund's NAV may change quickly and without warning.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the Exchange or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. When markets are stressed, Shares could suffer erratic or unpredictable trading activity, extraordinary volatility or wide bid/ask spreads, which could cause some market makers and APs to reduce their market activity or "step away" from making a market in

ETF shares. This could cause the Fund's market price to deviate, materially, from the NAV, and reduce the effectiveness of the ETF arbitrage process. Further, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the "circuit breaker" rules, which temporarily halt trading on the Exchange when a decline in the S&P 500 Index during a single day reaches certain thresholds (e.g., 7%, 13% and 20%). There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares, and this could lead to differences between the market price of the Shares and the underlying value of those Shares..

Sector Risk. To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.

- *Energy Sector Risk.* The market value of securities in the energy sector may decline for many reasons including, fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events that result in injury, loss of life or property, pollution or other environmental damage claims, terrorist threats or attacks, among other factors. Markets for various energy-related commodities can have significant volatility and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and may incur significant amounts of debt, to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may adversely affect companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure. Issuers in the energy sector may also be impacted by changing investor and consumer preferences arising from the sector's potential exposure to sustainability and environmental concerns.

The profitability of oil and gas companies is related to worldwide energy prices, exploration costs, and production spending. Oil and gas companies may be at risk for environmental damage claims and other types of litigation, as well as negative publicity and perception. Oil and gas companies may be adversely affected by natural disasters or other catastrophes, changes in exchange rates, interest rates, changes in prices for competitive energy services, economic conditions, tax treatment, government regulation and intervention, and unfavorable events in the regions where companies operate (e.g., expropriation, nationalization, confiscation of assets and property or imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). As a result, the value of these companies may fluctuate widely. Oil and gas companies may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks. Any of these factors could result in a material adverse impact on the Fund's securities and the performance of the Fund.

- *Industrial Sector Risk.* Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Transportation securities, a component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.
- *Materials Sector Risk.* Many materials companies are significantly affected by the level and volatility of commodity prices, exchange rates, import controls, worldwide competition, environmental policies and consumer demand. At times, worldwide production of industrial materials has exceeded demand as a result of over-building or economic downturns, leading to poor investment returns or losses. Other risks may include liabilities for environmental damage and general civil liabilities, depletion of resources, and mandated expenditures for safety and pollution control. The materials sector may also be affected by economic cycles, technical progress, labor relations, and government regulations.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Adviser's, Sub-Adviser's, or portfolio managers' success or failure to implement investment strategies for the Fund. The success of the Fund's investment program depends largely on the investment techniques and risk analyses applied by the Adviser, Sub-Adviser, and the portfolio managers and the skill of the Adviser, Sub-Adviser, and/or portfolio managers in evaluating, selecting, and monitoring the Fund's assets. The Fund could experience losses (realized and unrealized) if the judgment of the Adviser, Sub-Adviser, or portfolio managers about markets or sectors or the attractiveness of particular investments made for the Fund's portfolio prove to be incorrect. It is possible the investment techniques and risk analyses employed on behalf of the Fund will not produce the desired results. Absent unusual circumstances (e.g., the Adviser determines a different security has higher liquidity but offers a

similar investment profile as a recommended security), the Adviser will generally follow the Sub-Adviser's investment recommendations to buy, hold, and sell securities and financial instruments.

New Sub-Adviser Risk. The Sub-Adviser has no experience managing ETFs, which may limit the Sub-Adviser's effectiveness. However, the Fund's portfolio manager does have prior experience managing ETFs, which may alleviate this risk.

New Fund Risk. The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

FUND MANAGEMENT

Investment Adviser

Empowered Funds, LLC dba EA Advisers acts as the Fund's investment adviser (the "Adviser"). The Adviser selects the Fund's sub-adviser and oversees the sub-adviser's management of the Fund. The Adviser also provides trading, execution and various other administrative services and supervises the overall daily affairs of the Fund. The Adviser is located at 19 East Eagle Road, Havertown, PA 19083 and is wholly-owned by Alpha Architect LLC. The Adviser is registered with the Securities and Exchange Commission ("SEC") under the Investment Advisers Act of 1940, as amended (the "Advisers Act") and provides investment advisory services to the Fund, other exchange-traded funds, and Alpha Architect, LLC, its parent company. The Adviser was founded in October 2013.

The Adviser provides trading, execution and various other administrative services and supervises the overall daily affairs of the Funds, subject to the general supervision and control of the Board. The Adviser performs its services to the Fund pursuant to the terms of an investment advisory agreement (the "Advisory Agreement") between the Trust and the Adviser. The Adviser is entitled to receive an advisory fee based the Fund's average daily net assets for the services and facilities it provides payable at the annual rate of 0.75%.

The Adviser (or an affiliate of the Adviser) bears all of the Adviser's own costs associated with providing these advisory services and all expenses of the Fund, except for the fee payment under the Advisory Agreements, payments under the Fund's Rule 12b-1 Distribution and Service Plan (the "Plan"), brokerage expenses, acquired fund fees and expenses, taxes, interest (including borrowing costs), litigation expense and other non-routine or extraordinary expenses. Additionally, the Fund shall be responsible for its non-operating expenses and fees and expenses associated with the Fund's securities lending program, if applicable.

The Advisory Agreement for the Fund provides that it may be terminated at any time, without the payment of any penalty, by the Board or, with respect to the Fund, by a majority of the outstanding shares of the Fund, on 60 days' written notice to the Adviser, and by the Adviser upon 60 days' written notice, and that it shall be automatically terminated if it is assigned. The Adviser retains the authority, pursuant to the terms of the investment sub-advisory agreement, to exercise its right to control the overall management of the Fund's assets.

Investment Sub-Adviser

The Adviser has retained Sarmaya Partners, LLC an investment adviser registered with the SEC, to provide sub-advisory services for the Fund. The Sub-Adviser is organized as a Delaware limited liability company with its principal office located at 6002 Camp Bullis Road, Suite 201, San Antonio, Texas 78257, and was founded in January 2024. The Sub-Adviser offers investment management services to a private investment fund. The Sub-Adviser is responsible for determining the investments for the Fund, subject to the overall supervision and oversight of the Adviser and the Board.

The Sub-Adviser is responsible for selecting the investments for the Fund in accordance with the Fund's objectives, policies and restrictions. The Sub-Adviser is not responsible for selecting brokers or placing the Fund's trades. Rather, the Sub-Adviser constructs the overall portfolio and provides trading instructions to the Adviser, and, in turn, the Adviser is responsible for selecting brokers and placing the Fund's trades.

For its services, the Adviser pays the Sub-Adviser a fee, which is calculated daily and paid monthly, at an annual rate based on the Fund's average daily net assets as follows: 0.38% (annual rate as a percentage of average daily net assets).

Fund Sponsor

The Adviser has entered into a fund sponsorship agreement with the Sub-Adviser pursuant to which the Sub-Adviser is also the sponsor of the Fund ("Fund Sponsor"). Under this arrangement, the Fund Sponsor has agreed to provide financial support to the Fund (as described below) and, in turn, the Adviser has agreed to share with the Fund Sponsor a portion of profits, if any, generated by the Fund's Advisory Fee (also as described below). Every month, the Advisory Fee, which is a unitary management fee, is calculated and paid to the Adviser.

If the amount of the unitary management fee exceeds the Fund's operating expenses and the Adviser-retained amount, the Adviser pays the net total to the Fund Sponsor. The amount paid to the Fund Sponsor represents both the sub-advisory fee and any

remaining profits from the Advisory Fee. During months where there are no profits or the funds are not sufficient to cover the entire sub-advisory fee, the sub-advisory fee is automatically waived.

If the amount of the unitary management fee is less than the Fund's operating expenses and the Adviser-retained amount, Fund Sponsor is obligated to reimburse the Adviser for the shortfall.

The Adviser-retained amount represents an agreed upon fee arrangement between the Adviser and Fund Sponsor. This arrangement calls for the Fund Sponsor to pay the Adviser a fee and reimburse the Adviser for certain Fund operating expenses it paid pursuant to the Advisory Agreement.

APPROVAL OF ADVISORY AGREEMENT & INVESTMENT SUB-ADVISORY AGREEMENTS

A discussion regarding the basis for the Board's approval of the Advisory Agreement and the Sub-Advisory Agreement with respect to the Fund will be available in the Fund's first N-CSR.

Manager of Managers Structure

The Adviser and the Trust have received an exemptive order (the "Order") from the SEC that allows the Fund to operate in a "manager of managers" structure whereby the Adviser can appoint and replace unaffiliated sub-advisers, and enter into, amend and terminate sub-advisory agreements with such sub-advisers, each subject to Board approval, but without obtaining prior shareholder approval ("Manager of Managers Structure"). The Fund will, however, inform shareholders of the hiring of any new sub-adviser within 90 days after the hiring, to the extent the Fund is relying on the Order. The Order provides the Fund with greater flexibility and efficiency by preventing the Fund from incurring the expense and delays associated with obtaining shareholder approval of such sub-advisory agreements.

To the extent the Fund relies on the Order, the Fund's use of the Manager of Managers Structure is subject to certain conditions that are set forth in the Order. Under the Manager of Managers Structure, the Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee sub-advisers and recommend their hiring, termination and replacement. The Adviser will also, subject to the review and approval of the Board; set the Fund's overall investment strategy; evaluate, select and recommend sub-advisers to manage all or a portion of the Fund's assets; and implement procedures reasonably designed to ensure that each sub-adviser complies with the Fund's investment goal, policies and restrictions. Subject to review by the Board, the Adviser will allocate and, when appropriate, reallocate the Fund's assets among sub-advisers and monitor and evaluate the sub-advisers' performance.

PORTFOLIO MANAGER

Mr. Wasif Latif is a Co-Founder, President and Chief Investment Officer of Sarmaya Partners, LLC, the Sub-Adviser to the Fund. Prior to founding Sarmaya in 2024, Mr. Latif had spent the last 25 years managing equity, global multi-asset and multi-manager portfolios in mutual funds and ETFs, wealth management platforms, and institutional portfolios. Previously, Mr. Latif served as Portfolio Manager and Strategist for Truist Wealth from January 2022 to December 2023. Additionally, Mr. Latif served as Head of Investments Solutions, Victory Capital, from July 2019 to February 2021, where he managed equity, multi-asset, and index funds and ETFs. In addition, Mr. Latif served as Head of Global Multi-Assets, USAA Asset Management, from 2006 to 2019. From 1998 to 2006, Mr. Latif also served as a Portfolio Manager for Deutsche Bank Wealth, where he managed multi-asset and international equity portfolios.

The Fund's SAI provides additional information about the portfolio manager, including other accounts managed, ownership in the Fund, and compensation.

OTHER SERVICE PROVIDERS

Quasar Distributors, LLC ("Distributor") serves as the distributor of Creation Units (defined above) for the Fund on an agency basis. The Distributor does not maintain a secondary market in Shares.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, is the administrator, fund accountant, and transfer agent for the Fund.

U.S. Bank National Association is the custodian for the Fund.

Practus, LLP, 11300 Tomahawk Creek Parkway, Suite 310, Leawood, Kansas 66211, serves as legal counsel to the Trust.

Tait, Weller & Baker LLP, 50 South 16th Street, Suite 2900, Philadelphia, Pennsylvania 19102, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

THE EXCHANGE

Shares are not sponsored, endorsed or promoted by the Exchange. The Exchange is not responsible for, nor has it participated, in the determination of the timing of, prices of, or quantities of Shares to be issued, nor in the determination or calculation of the

equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing or trading of Shares. Without limiting any of the foregoing, in no event shall the Exchange have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

BUYING AND SELLING FUND SHARES

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. Creation Units are generally issued and redeemed only in-kind for securities although a portion may be in cash.

Shares will trade on the secondary market, however, which is where most retail investors will buy and sell Shares. It is expected that only a limited number of institutional investors, called Authorized Participants or “APs,” will purchase and redeem Shares directly from the Fund. APs may acquire Shares directly from the Fund, and APs may tender their Shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units. Purchases and redemptions directly with the Fund must follow the Fund’s procedures, which are described in the SAI.

Except when aggregated in Creation Units, Shares are not redeemable with the Fund.

BUYING AND SELLING SHARES ON THE SECONDARY MARKET

Most investors will buy and sell Shares in secondary market transactions through brokers and, therefore, must have a brokerage account to buy and sell Shares. Shares can be bought or sold through your broker throughout the trading day like shares of any publicly traded issuer. The Trust does not impose any redemption fees or restrictions on redemptions of Shares in the secondary market. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered prices in the secondary market for Shares. The price at which you buy or sell Shares (*i.e.*, the market price) may be more or less than the NAV of the Shares. Unless imposed by your broker, there is no minimum dollar amount you must invest in the Fund and no minimum number of Shares you must buy.

Shares of the Fund are listed on the Exchange under the following symbol:

Fund	Trading Symbol
Sarmaya Thematic ETF	LENS

The Exchange is generally open Monday through Friday and is closed for weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Washington’s Birthday, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

For information about buying and selling Shares on the Exchange or in the secondary markets, please contact your broker or dealer.

Book Entry. Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”), or its nominee, will be the registered owner of all outstanding Shares and is recognized as the owner of all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely on the procedures of DTC and its participants. These procedures are the same as those that apply to any stocks that you hold in book entry or “street name” through your brokerage account. Your account information will be maintained by your broker, which will provide you with account statements, confirmations of your purchases and sales of Shares, and tax information. Your broker also will be responsible for distributing income dividends and capital gain distributions and for ensuring that you receive shareholder reports and other communications from the Fund.

Share Trading Prices. The trading prices of Shares may differ from the Fund’s daily NAV and can be affected by market forces of supply and demand for Shares, the prices of the Fund’s portfolio securities, economic conditions and other factors.

The Exchange through the facilities of the Consolidated Tape Association or another market information provider intends to disseminate the approximate value of the Fund’s portfolio every fifteen seconds during regular U.S. trading hours. This approximate value should not be viewed as a “real-time” update of the NAV of the Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day. The quotations for certain investments may not be updated during U.S. trading hours if such holdings do not trade in the U.S., except such quotations may be updated to reflect currency fluctuations. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate values and makes no warranty as to the accuracy of these values.

Continuous Offering. The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a

“distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirements and liability provisions of the Securities Act. For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the Investment Company Act of 1940, as amended (the “Investment Company Act”). As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

ACTIVE INVESTORS AND MARKET TIMING

The Board has evaluated the risks of market timing activities by the Fund’s shareholders. The Board noted that Shares can be purchased and redeemed directly from the Fund only in Creation Units by APs and that the vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), the Board noted that those trades do not cause the harmful effects (as previously noted) that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, the Board noted that those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund’s ability to achieve its investment objective, although in certain circumstances (*e.g.*, in conjunction with a reallocation of the Fund’s investments), such trades may benefit Fund shareholders by increasing the tax efficiency of the Fund. The Board also noted that direct trading by APs is critical to ensuring that Shares trade at or close to NAV. In addition, the Fund will impose transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by the Fund in effecting trades. Given this structure, the Board determined that it is not necessary to adopt policies and procedures to detect and deter market timing of Shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted the Plan pursuant to Rule 12b-1 under the Investment Company Act. Under the Plan, the Fund may be authorized to pay distribution fees of up to 0.25% of its average daily net assets each year to the Distributor and other firms that provide distribution and shareholder services (“Service Providers”). As of the date of this Prospectus, the maximum amount payable under the Plan is set at 0% until further action by the Board. In the event 12b-1 fees are charged, over time they would increase the cost of an investment in the Fund because they would be paid on an ongoing basis.

NET ASSET VALUE

The NAV of Shares is calculated each business day as of the close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m., Eastern time.

The Fund calculates its NAV per Share by:

- Taking the current market value of its total assets,
- Subtracting any liabilities, and
- Dividing that amount by the total number of Shares owned by shareholders.

If you buy or sell Shares on the secondary market, you will pay or receive the market price, which may be higher or lower than NAV. Your transaction will be priced at NAV only if you purchase or redeem your Shares in Creation Units.

Because securities listed on foreign exchanges may trade on weekends or other days when the Fund does not price its Shares, the NAV of the Fund, to the extent it may hold foreign securities, may change on days when shareholders will not be able to purchase or sell Shares. In particular, where all or a portion of the Fund’s underlying securities trade in a market that is closed when the market in which the Fund’s shares are listed and trading in that market is open, there may be changes between the last quote from

its closed foreign market and the value of such security during the Fund's domestic trading day. In addition, please note that this in turn could lead to differences between the market price of the Fund's shares and the underlying value of those shares.

Equity securities that are traded on a national securities exchange, except those listed on the NASDAQ Global Market[®] ("NASDAQ") are valued at the last reported sale price on the exchange on which the security is principally traded. Securities traded on NASDAQ will be valued at the NASDAQ Official Closing Price ("NOCP"). If, on a particular day, an exchange-traded or NASDAQ security does not trade, then the most recent quoted bid for exchange traded or the mean between the most recent quoted bid and ask price for NASDAQ securities will be used. Equity securities that are not traded on a listed exchange are generally valued at the last sale price in the over-the-counter market. If a nonexchange traded security does not trade on a particular day, then the mean between the last quoted closing bid and asked price will be used.

The value of assets denominated in foreign currencies is converted into U.S. dollars using exchange rates deemed appropriate by the Fund.

Redeemable securities issued by open-end investment companies are valued at the investment company's applicable net asset value, with the exception of exchange-traded open-end investment companies which are priced as equity securities.

If a market price is not readily available or is deemed not to reflect market value, the Fund will determine the price of the security held by the Fund based on a determination of the security's fair value pursuant to policies and procedures approved by the Board.

To the extent the Fund holds securities that may trade infrequently, fair valuation may be used more frequently. Fair valuation may have the effect of reducing stale pricing arbitrage opportunities presented by the pricing of Shares. However, when the Fund uses fair valuation to price securities, it may value those securities higher or lower than another fund would have priced the security. Also, the use of fair valuation may cause the Shares' NAV performance to diverge from the Shares' market price and from the performance of various benchmarks used to compare the Fund's performance because benchmarks generally do not use fair valuation techniques. Because of the judgment involved in fair valuation decisions, there can be no assurance that the value ascribed to a particular security is accurate.

FUND WEBSITE AND DISCLOSURE OF PORTFOLIO HOLDINGS

The Trust maintains a website for the Fund at www.sarmayaetf.com. Among other things, the website includes this Prospectus and the SAI, and will include the Fund's annual and semi-annual reports to shareholders, financial information, holdings, and proxy information. The website shows the Fund's daily NAV per share, market price, and premium or discount, each as of the prior business day. The website also shows the extent and frequency of the Fund's premiums and discounts. Further, the website includes the Fund's median bid-ask spread over the most recent thirty calendar days.

Each day the Fund is open for business, the Trust publicly disseminates the Fund's full portfolio holdings as of the close of the previous day through its website at www.sarmayaetf.com. A description of the Trust's policies and procedures with respect to the disclosure of the Fund's portfolio holdings is available in the Fund's SAI.

INVESTMENTS BY OTHER INVESTMENT COMPANIES

For purposes of the Investment Company Act, Shares are issued by a registered investment company and purchases of such Shares by registered investment companies and companies relying on Section 3(c)(1) or 3(c)(7) of the Investment Company Act are subject to the restrictions set forth in Section 12(d)(1) of the Investment Company Act, except as permitted by Rule 6c-11, Rule 12d1-4, or an exemptive order of the SEC.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when:

- Your Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Dividends and Distributions

Dividends and Distributions. The Fund intends to elect and intends to qualify each year as a regulated investment company under the Internal Revenue Code of 1986, as amended. As a regulated investment company, the Fund generally pays no U.S. federal income tax on the income and gains it distributes to you. The Fund expects to declare and to distribute its net investment income, if any, to shareholders as dividends annually. The Fund will distribute net realized capital gains, if any, at least annually. The Fund

may distribute such income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate U.S. federal excise or income taxes on the Fund. The amount of any distribution will vary, and there is no guarantee the Fund will pay either an income dividend or a capital gains distribution. Distributions may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Avoid "Buying a Dividend." At the time you purchase Shares of the Fund, the Fund's NAV may reflect undistributed income, undistributed capital gains, or net unrealized appreciation in value of portfolio securities held by the Fund. For taxable investors, a subsequent distribution to you of such amounts, although constituting a return of your investment, would be taxable. Buying Shares in the Fund just before it declares an income dividend or capital gains distribution is sometimes known as "buying a dividend."

Taxes

Tax Considerations. The Fund expects, based on its investment objective and strategies, that its distributions, if any, will be taxable as ordinary income, capital gains, or some combination of both. This is true whether you reinvest your distributions in additional Shares or receive them in cash. For U.S. federal income tax purposes, Fund distributions of short-term capital gains are taxable to you as ordinary income. Fund distributions of long-term capital gains are taxable to you as long-term capital gain no matter how long you have owned your Shares. A portion of income dividends reported by the Fund may be qualified dividend income eligible for taxation by certain shareholders at long-term capital gain rates provided certain holding period requirements are met.

Taxes on Sales of Shares. A sale or exchange of Shares is a taxable event and, accordingly, a capital gain or loss will generally be recognized. Currently, any capital gain or loss realized upon a sale of Shares generally is treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses may be limited.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Shares) of U.S. individuals, estates, and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds a threshold amount. This Medicare tax, if applicable, is reported by you on, and paid with, your U.S. federal income tax return.

Backup Withholding. By law, if you do not provide the Fund with your proper taxpayer identification number and certain required certifications, you may be subject to backup withholding on any distributions of income, capital gains or proceeds from the sale of your Shares. The Fund also must backup withhold if the Internal Revenue Service ("IRS") instructs it to do so. When backup withholding is required, the amount will be 24% of any distributions or proceeds paid.

State and Local Taxes. Fund distributions and gains from the sale or exchange of your Shares generally are subject to applicable state and local taxes.

Taxes on Purchase and Redemption of Creation Units. An AP who exchanges equity securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of purchase and the exchanger's aggregate basis in the securities surrendered and the cash amount paid. A person who exchanges Creation Units for equity securities generally will recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the aggregate market value of the securities received and the cash amount received. The IRS, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether the wash sale rules apply and when a loss might not be deductible.

Under current U.S. federal tax laws, any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short-term capital gain or loss if the Shares have been held for one year or less.

If the Fund redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

Foreign Tax Credits. If the Fund qualifies to pass through to you the tax benefits from foreign taxes it pays on its investments, and elects to do so, then any foreign taxes it pays on these investments may be passed through to you as a foreign tax credit.

Non-U.S. Investors. Non-U.S. investors may be subject to U.S. federal withholding tax at a 30% or lower treaty rate and are subject to special U.S. federal tax certification requirements to avoid backup withholding and claim any treaty benefits. An exemption from U.S. federal withholding tax is provided for capital gain dividends paid by the Fund from long-term capital gains, if any. However, interest-related dividends paid by the Fund from its qualified net interest income from U.S. sources and short-term capital gain dividends may be exempt from U.S. withholding provided the Fund makes certain designations and other requirements are met. Furthermore, notwithstanding such exemptions from U.S. federal withholding at the source, any such

dividends and distributions of income and capital gains will be subject to U.S. federal backup withholding at a rate of 24% if you fail to properly certify that you are not a U.S. person. In addition, U.S. estate tax may apply to Shares of the Fund.

Other Reporting and Withholding Requirements. Under the Foreign Account Tax Compliance Act (FATCA), the Fund will be required to withhold a 30% tax on (i) income dividends paid by the Fund, and (ii) possibly in the future, certain capital gain distributions and the proceeds arising from the sale of Shares paid by the Fund, to certain foreign entities, referred to as foreign financial institutions or non-financial foreign entities, that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. The Fund may disclose the information that it receives from its shareholders to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of the Fund fails to provide the Fund with appropriate certifications or other documentation concerning its status under FATCA.

Possible Tax Law Changes. At the time that this prospectus is being prepared, various administrative and legislative changes to the U.S. federal tax laws are under consideration, but it is not possible at this time to determine whether any of these changes will be made or what the changes might entail.

This discussion of “Dividends, Distributions and Taxes” is not intended or written to be used as tax advice. Because everyone’s tax situation is unique, you should consult your tax professional about U.S. federal, state, local or foreign tax consequences before making an investment in the Fund.

FINANCIAL HIGHLIGHTS

The Fund is newly organized and therefore has not yet had any operations as of the date of this Prospectus and does not have financial highlights to present at this time.

If you would like more information about the Fund and the Trust, the following documents are available free, upon request:

ANNUAL/SEMI-ANNUAL REPORTS TO SHAREHOLDERS

Additional information about the Fund will be in its annual and semi-annual reports to shareholders, when available. The annual report will explain the market conditions and investment strategies affecting the Fund's performance during the last fiscal year.

STATEMENT OF ADDITIONAL INFORMATION

The SAI dated January 24, 2025, which contains more details about the Fund, is incorporated by reference in its entirety into this Prospectus, which means that it is legally part of this Prospectus.
