

ALPHA ARCHITECT US EQUITY 3 ETF

Ticker Symbol: AAUA

Listed on Cboe BZX Exchange, Inc.

SUMMARY PROSPECTUS

May 1, 2026

<https://funds.alphaarchitect.com>

Before you invest, you may want to review the Fund's Prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated March 13, 2026, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund, as well as recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid/ask spreads, online at <https://funds.alphaarchitect.com/aaua>. You can also get this information at no cost by calling (215) 882-9983.

INVESTMENT OBJECTIVE

The Alpha Architect US Equity 3 ETF (the "Fund") seeks to achieve long-term capital appreciation.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ¹	0.09%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ²	0.00%
Total Annual Fund Operating Expenses¹	0.09%

1. The Fund's Management Fee and Total Annual Fund Operating Expenses are 0.0945%. The Management Fee has been restated to reflect current fees.

2. Other Expenses are estimated for the current fiscal year.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then hold or sell all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:
\$10	\$30

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. As of the date of this Prospectus, the Fund has not yet commenced operations and portfolio turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund is an actively managed exchange-traded fund ("ETF") managed by Alpha Architect, LLC, the Fund's investment sub-adviser (the "Sub-Adviser"). The Fund's primary strategy seeks to achieve broad-based exposure to the U.S. equity market through a diverse group of U.S. companies across market sectors, styles (e.g., value or growth), and industry groups or ETFs that provide similar exposure to U.S. companies. Under normal circumstances, at least 80% of the Fund's net assets (plus the amount of any borrowings for investment purposes) will be invested in the equity securities of U.S. companies. The Sub-Adviser defines U.S. companies as companies whose securities are traded principally in the United States or that have their principal place of business in the United States.

The Fund's investments in other ETFs may be selected for their ability to represent companies of a certain market capitalization, a particular sector (e.g., information technology companies), or a subset of an asset class (e.g., small cap value companies or master limited partnerships ("MLPs")), or based on factors such as their risk adjusted return, alpha, style (e.g., growth or value), or other factors that help the Fund achieve broad exposure across U.S. equities. The Fund's investments in other ETFs may include ETFs that are affiliated (i.e., that have the same investment adviser or sub-adviser) and ETFs that use a variety of strategies, such as

hedged or buffer strategies that seek to protect against a certain amount of drawdown from an underlying benchmark, long/short strategies, options strategies (e.g., covered call strategies), and actively-managed or index-based strategies.

The Fund seeks to achieve broad exposure to U.S. equity markets, including exposure to both dividend and non-dividend paying U.S. companies directly or in ETFs that invest in dividend-paying stocks. The Fund's investment universe of stocks typically starts with publicly traded U.S. equity securities, including common and preferred stocks and MLPs, that have a market capitalization of \$1 billion or greater at the time of purchase, excluding business development companies and special purpose acquisition companies (SPACs). The Fund may also include investments in depositary receipts (e.g., American Depositary Receipts ("ADRs")) representing equity securities of non-U.S. companies and in other ETFs that invest a portion or all of their assets in non-U.S. companies, though such investments are generally expected to comprise less than 10% of the Fund's net assets. The Sub-Adviser generally applies a weighting process that is designed to favor those companies with higher market capitalizations relative to the other companies in the investment universe. Market capitalization is derived by multiplying the number of outstanding shares by the market price of each share.

Although the Fund seeks investments across a broad array of sectors and companies, from time to time, based on market conditions and portfolio positioning, the Fund's investment strategy may emphasize exposure to particular sectors, and the Fund may have exposure to large-, mid- and small-capitalization U.S. companies.

As a secondary strategy, the Sub-Adviser may implement a systematic dividend-timing strategy. As part of such strategy, the Sub-Adviser monitors the Fund's portfolio to identify securities or ETFs expected to pay a dividend in the immediate future and evaluates whether to replace such securities or ETFs prior to their distribution record date. This strategy is informed by the Sub-Adviser's proprietary research indicating that demand for dividend-paying securities tends to be elevated prior to a dividend distribution (potentially raising prices relative to fundamentals) and depressed following distribution (potentially lowering prices relative to fundamentals). The Fund seeks to take advantage of these imbalances while preserving broad market exposure. The Sub-Adviser intends to use the dividend-timing strategy only to the extent that such strategy does not detract from the Fund's broad market exposure and after considering the impact of such strategy on transactions costs, tax treatment, and other factors.

The Sub-Adviser may elect not to replace a holding that is scheduled to pay a dividend to maintain the portfolio's broad exposure, to avoid the costs associated with replacing a holding, or based on other effects that replacing a security would have on the Fund. While the Fund is expected to have a lower yield than it would if the Sub-Adviser did not replace stocks prior to their distribution record date, there is no guarantee that the dividend-timing strategy will be successful in its attempt to minimize the Fund's taxable income or improve the Fund's performance.

The Fund may invest in options contracts (puts and calls) to obtain exposure to the broad U.S. equity market or any segment of the U.S. equity market either as a replacement for direct investments in such securities or as a means of obtaining more efficient exposure for the Fund than through equity or ETF investments.

The Sub-Adviser will reconstitute the Fund's investment universe at least annually (e.g., April of each year) following its reevaluation of the Fund's investment universe. The Fund's strategy may result in frequent trading resulting in increased transactional costs.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading "*Additional Information About the Fund's Principal Investment Risks.*"

Large-Capitalization Companies Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large-capitalization companies has trailed the overall performance of the broader securities markets.

Mid-Capitalization Companies Risk. Investing in securities of mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. Often mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

Small-Capitalization Companies Risk. The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and, during adverse circumstances, may be more difficult to sell and receive a sales price comparable to the value assigned to the security by the Fund. These securities are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less

publicly available information concerning smaller-capitalization companies than for larger, more established companies, which may make the valuation of such securities more difficult if there is not a readily available market price.

Risk of Investing in the United States. Certain changes in the U.S. economy, such as when the U.S. economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends, or events that are not specifically related to the issuer of the security or to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Investment Strategy Risk. There is no guarantee that the Fund will be able to successfully minimize the taxable income generated by an investment in Fund Shares.

Non-Diversification Risk. Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of the Shares and greater risk of loss.

High Portfolio Turnover Risk. The Fund's investment strategy is expected to result in higher turnover rates. This may increase the Fund's brokerage commission costs, which could negatively impact the performance of the Fund. Rapid portfolio turnover may expose shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes. In order to effectuate the Fund's strategy, the Sub-Adviser is relying upon the ability to conduct in-kind redemptions of the Fund's portfolio holdings. In the event that the Sub-Adviser is unable to do so, the ability of the Sub-Adviser to minimize the taxable income generated by an investment in Fund Shares will be impaired.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates, and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market, or securities markets generally.

Investment Company Risk. An investment in other registered investment companies (including other ETFs, affiliated and non-affiliated) is subject to the risks associated with those investment companies, which include, but are not limited to, the risk that such fund's investment strategy may not produce the intended results; the risk that securities in such fund may underperform in comparison to the general securities markets or other asset classes; and the risk that the fund will be concentrated in a particular issuer, market, industry, or sector, and therefore will be especially susceptible to loss due to adverse occurrences affecting that issuer, market, industry, or sector. Moreover, the Fund will incur duplicative expenses from such investments, bearing its share of that fund's expenses while also paying its own advisory fees and trading costs. Investments in ETFs are also subject to the "ETF Risks" described below.

ETF Risks.

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on Cboe BZX Exchange, Inc. (the "Exchange") or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which

can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund's trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size).

Sector Risk. If the Fund's portfolio is overweighted in a certain sector, any negative economic, financial, market, business, or other developments affecting that sector will have a greater impact on the Fund than on a fund that is not overweighted in that sector. A certain sector may underperform other sectors or the market as a whole. Economic or market factors, regulation or deregulation, and technological or other developments may negatively impact all companies in a particular sector. This may increase the risk of loss associated with an investment in the Fund and increase the volatility of the Fund's net asset value per share.

Market Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations, and the risks inherent in investment in interest rate sensitive markets. Interest rate markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, the investment's average time to maturity, changes in interest rates, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities markets and adversely affect global economies and markets. Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's or portfolio managers' success or failure to implement investment strategies for the Fund. The success of the Fund's investment program depends on the Sub-Adviser and the portfolio managers' skill in implementing the Fund's investment strategy. It is important to note that, as part of the security selection process, the Sub-Adviser does not perform any type of fundamental or quantitative analysis on the component companies. Security selection and weighting are driven primarily by a securities market capitalization.

Annual Reevaluation Risk. The Fund's investment universe will be reevaluated annually by the Sub-Adviser. As a result, the Fund's exposure to one or more securities may be affected by significant price movements promptly following the annual re-evaluation. Such lags between re-evaluations may result in significant performance swings relative to the broader equity markets.

Buying or Purchasing Options Risk. Options are instruments whose value is derived from that of other assets, rates, or indexes. Since many factors influence the value of an option, including the price of the underlying asset, the exercise price, the time to expiration, the interest rate, and the dividend rate of the underlying asset, the buyer's success in implementing an option buying strategy may depend on an ability to predict movements in the prices of individual assets, fluctuations in markets, and movements in interest rates. There is no assurance that a liquid market will exist when the buyer seeks to close out any option position.

Counterparty Risk. Counterparty risk is the risk that a counterparty to a financial instrument held by the Fund may become insolvent or otherwise fail to perform its obligations, and the Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed. Exchange listed options are issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the options contracts. In the unlikely event that the OCC becomes insolvent or is otherwise unable to meet its settlement obligations, the Fund could suffer significant losses. Also, since the Fund is not a member of the OCC (a "clearing member"), and only clearing members can participate directly in the OCC, the Fund will hold options contracts through commingled omnibus accounts at clearing members. As a result, Fund assets deposited with a clearing member as margin for options contracts may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. Although clearing members guarantee performance of their clients' obligations to the OCC, there is a risk that Fund assets might not be fully protected in the event of the clearing member's bankruptcy.

MLP Risk. Investment in MLPs or ETFs that invest in MLPs involves risks that differ from investments in common stock, including risks related to limited control and limited rights to vote on matters affecting the MLP, risks related to potential conflicts of interest between the MLP and the MLP's general partner, cash flow risks, dilution risks and risks related to the general partner's right to require unit-holders to sell their common units at an undesirable time or price. Certain MLP securities may trade in lower volumes due to their smaller capitalizations. Accordingly, those MLPs may be subject to more abrupt or erratic price movements and may lack sufficient market liquidity to enable the Fund to effect sales at an advantageous time or without a substantial drop in price. MLPs are generally considered interest-rate sensitive investments. During periods of interest rate volatility, these investments may not provide attractive returns.

New Fund Risk. The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

In-Kind Contribution Risk. At its launch, the Fund expects to acquire a material amount of assets through one or more in-kind contributions that are intended to qualify as tax-deferred transactions governed by Section 351 of the Internal Revenue Code of 1986, as amended. If one or more of the in-kind contributions were to fail to qualify for tax-deferred treatment, then the Fund

would not take a carryover tax basis in the applicable contributed assets and would not benefit from a tacked holding period in those assets. This could cause the Fund to incorrectly calculate and report to shareholders the amount of gain or loss recognized and/or the character of gain or loss (e.g., as long-term or short-term) on the subsequent disposition of such assets. In addition, the failure of a contribution to satisfy the requirements of Section 351 could cause the contribution to be treated as a taxable event for the contributing shareholder at the time of contribution. If such failure is not discovered until a later time, this could also cause the contributing shareholder to incorrectly calculate and report gain or loss on the shareholder's disposition of Fund shares.

PERFORMANCE

Performance information is not provided below because the Fund has not yet been in operation for one full calendar year. When provided, the information will provide some indication of the risks of investing in the Fund by showing how the Fund's average annual returns compare with a broad measure of market performance. Past performance does not necessarily indicate how the Fund will perform in the future. Updated performance information will be available at <https://funds.alphaarchitect.com>.

INVESTMENT ADVISER & INVESTMENT SUB-ADVISER

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the "Adviser")

Investment Sub-Adviser: Alpha Architect, LLC (the "Sub-Adviser")

PORTFOLIO MANAGERS

Wesley R. Gray, Chief Executive Officer and Co-Chief Investment Officer, and John R. Vogel, Co-Chief Investment Officer and Chief Financial Officer, of the Sub-Adviser, are co-portfolio managers for the Fund. Each portfolio manager has managed the Fund since its inception.

PURCHASE AND SALE OF SHARES

Individual Shares are listed on a national securities exchange and may only be purchased and sold in the secondary market through a broker-dealer at a market price. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (at a "premium") or less than NAV (at a "discount"). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying and selling Shares in the secondary market (the "bid/ask spread").

TAX INFORMATION

The Fund's distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an Individual Retirement Account ("IRA") or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
