

**ALPHA ARCHITECT U.S. QUANTITATIVE MOMENTUM
ETF**

Ticker Symbol: QMOM

Listed on The Nasdaq Stock Market LLC

SUMMARY PROSPECTUS
February 1, 2026

<https://funds.alphaarchitect.com>

Before you invest, you may want to review the Fund's Prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated February 1, 2026, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund, as well as recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid/ask spreads, online at <https://funds.alphaarchitect.com/qmom/>. You can also get this information at no cost by calling (215) 882-9983.

INVESTMENT OBJECTIVE

The Alpha Architect U.S. Quantitative Momentum ETF (the "Fund") seeks long-term capital appreciation.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

ANNUAL FUND OPERATING EXPENSES (EXPENSES THAT YOU PAY EACH YEAR AS A PERCENTAGE OF THE VALUE OF YOUR INVESTMENT)

| | |
|---|--------------|
| Management Fee ¹ | 0.28% |
| Distribution and/or Service (12b-1) Fees | None |
| Other Expenses | 0.00% |
| Total Annual Fund Operating Expenses | 0.28% |

¹ Management Fee has been restated to reflect current fee.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then hold or sell all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

| One Year: | Three Years: | Five Years: | Ten Years: |
|------------------|---------------------|--------------------|-------------------|
| \$29 | \$90 | \$157 | \$356 |

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. For the fiscal year ended September 30, 2025, the Fund's portfolio turnover rate was 399% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund's Investment Strategy

The Fund is actively managed by Alpha Architect, LLC, the Fund's investment sub-adviser ("Alpha Architect" or the "Sub-Adviser"). Under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in U.S.-listed companies that meet the Sub-Adviser's definition of momentum ("Momentum Companies"). The Fund defines Momentum Companies as companies that, within the universe of the

largest 1,500 U.S.-listed stocks by market capitalization, are among the 500 with the highest cumulative total returns over the past 12 months, excluding the most recent month.

The Sub-Adviser employs a multi-step, quantitative, rules-based methodology to identify a portfolio of approximately 50 to 200 equity securities with the highest relative momentum, as described below.

The Sub-Adviser analyzes an initial universe of liquid stocks that principally trade on a U.S. exchange. Typically, the minimum market capitalization for the smallest-capitalization stocks in the initial universe is above \$1 billion.

The Sub-Adviser eliminates from the initial universe illiquid securities, exchange-traded funds (ETFs), and stocks of companies with less than twelve months of available financial data. The resulting universe is composed primarily of highly liquid, small-, mid- and large-cap stocks.

The Sub-Adviser then employs proprietary screens to eliminate companies with issues that may negatively impact their momentum. For example, the Sub-Adviser will generally eliminate companies that measure poorly on any of the following variables: (1) past six-month momentum (lower is bad), (2) past nine-month momentum (lower is bad), and (3) beta (higher is bad).

Next, the Sub-Adviser screens the remaining universe of companies to identify the companies with the highest cumulative return for the past 12 months, excluding the most recent month. Last, the Sub-Adviser employs an ensemble of momentum quality screens to identify which of the remaining companies has experienced the most consistent positive returns, as opposed to short-lived success during the 12-month period measured above. The Sub-Adviser then selects the top 50 to 200 momentum stocks.

The Fund may have significant exposure to one or more of the following sectors: Information Technology, Financials, and Industrials.

The Sub-Adviser will reallocate the Fund's portfolio on a periodic basis, generally each month.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading *"Additional Information About the Funds' Principal Investment Risks."*

Momentum Style Risk. Investing in or having exposure to securities with the highest relative momentum entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. Returns on securities that have previously exhibited momentum may be less than returns on other styles of investing or the overall stock market. Momentum can turn quickly and cause significant variation from other types of investments, and stocks that previously exhibited high momentum may not experience continued highest relative momentum. In addition, there may be periods when the momentum style is out of favor, and during which the investment performance of the Fund using a momentum strategy may suffer.

Quantitative Security Selection Risk. Data for some companies may be less available and/or less current than data for companies in other markets. The Sub-Adviser uses quantitative models, and its processes could be adversely affected if erroneous or outdated data is utilized. In addition, securities selected using a quantitative model could perform differently from the financial markets as a whole as a result of the characteristics used in the analysis, the weight placed on each characteristic and changes in the characteristic's historical trends.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Sector Risk. Companies with similar characteristics may be grouped together in broad categories called sectors. A certain sector may underperform other sectors or the market as a whole. As the Sub-Adviser allocates more of the Fund's portfolio holdings to a particular sector, the Fund's performance will be more susceptible to any economic, business or other developments which generally affect that sector.

- *Financials Sector Risk.* The Fund has exposure to companies in the financials sector, and therefore, the Fund's performance could be negatively impacted by events affecting this sector. The financials sector

includes, for example, banks and financial institutions providing mortgage and mortgage related services. This sector can be significantly affected by, among other things, changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and fallout from the housing and sub-prime mortgage crisis.

- *Industrials Sector Risk.* The value of securities issued by companies in the industrials sector may be affected by supply and demand both for their specific products or services and for industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction.
- *Information Technology Sector Risk.* Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. Therefore, you may lose money by investing in the Fund. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security, such as geopolitical events and environmental disasters. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Large-Capitalization Companies Risk. Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years. Larger, more established companies may be slow to respond to challenges and may grow more slowly than smaller companies.

Small- and Mid-Capitalization Company Risk. Investing in securities of small- and mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

Management Risk. The Fund is actively managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Periodic Reallocation Risk. Because the Sub-Adviser will generally reallocate the Fund's portfolio on a periodic basis, generally each month, (i) the Fund's market exposure may be affected by significant market movements promptly following the periodic reconstitution that are not predictive of the market's performance for the subsequent period and (ii) changes to the Fund's market exposure may lag a significant change in the market's direction (up or down) by as long as a month if such changes first take effect promptly following the periodic reallocation. Such lags between market performance and changes to the Fund's exposure may result in significant underperformance relative to the broader equity or fixed income market.

High Portfolio Turnover Risk. The Fund's investment strategy may from time-to-time result in higher turnover rates. This may increase the Fund's brokerage commission costs, which could negatively impact the performance of the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there

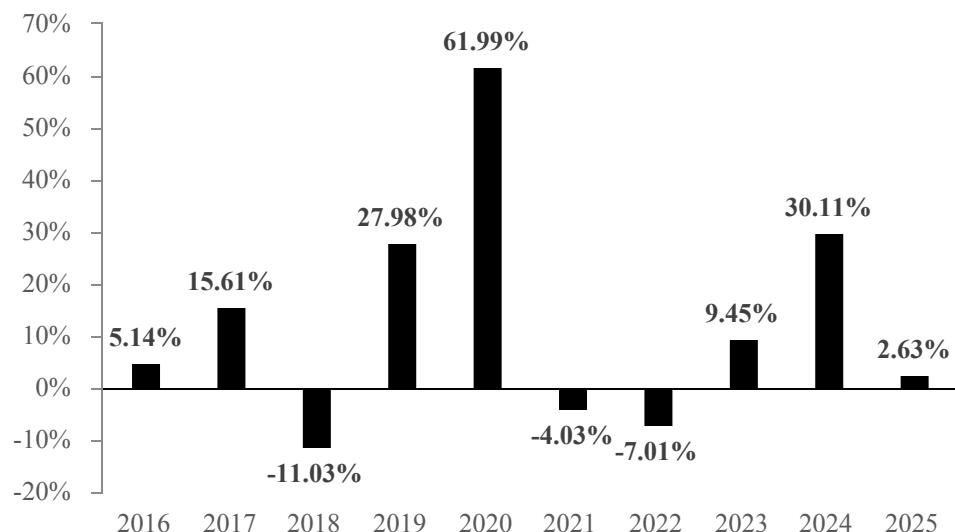

may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

- *Premium-Discount Risk.* The Shares may trade above or below their net asset value (“NAV”). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on The Nasdaq Stock Market, LLC (the “Exchange”) or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the “spread,” that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund’s trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size).

PERFORMANCE

The following information provides some indication of the risks of investing in the Fund. The bar chart shows the Fund’s performance for calendar years ended December 31. The table shows how the Fund’s average annual returns for one-year, five-year, ten-year, and since inception periods compare with those of a broad measure of market performance. For the period February 1, 2017 through January 30, 2022, the Fund was passively-managed and the Fund sought to track the performance of a propriety index that was constructed in a manner substantially similar to the methodology used to manage the Fund. The Fund’s past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Performance information is also available on the Fund’s website at <https://funds.alphaarchitect.com> or by calling the Fund at (215) 882-9983.

Calendar Year Total Returns as of December 31

During the period of time shown in the bar chart, the Fund's highest return for a calendar quarter was 36.45% (quarter ended June 30, 2020) and the Fund's lowest return for a calendar quarter was -25.54% (quarter ended December 31, 2018).

**Average Annual Total Returns
(for periods ended December 31, 2025)**

| | | | | Since Inception | |
|--|--|---------------|----------------|------------------------|------------------|
| | | 1 Year | 5 Years | 10 Years | (12/1/15) |
| Alpha Architect U.S. Quantitative Momentum ETF | | | | | |
| Return Before Taxes | | 2.63% | 5.45% | 11.33% | 10.56% |
| Return After Taxes on Distributions | | 2.50% | 5.20% | 11.17% | 10.41% |
| Return After Taxes on Distributions and Sale of Shares | | 1.65% | 4.19% | 9.40% | 8.72% |
| Solactive GBS United States 1000 Index | (reflects no deduction for fees, taxes, or expenses) | 17.01% | 12.99% | 13.99% | 13.55% |

After-tax returns are calculated using the highest historical individual U.S. federal marginal income tax rates during the period covered by the table and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your shares through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account (“IRA”).

The Solactive GBS United States 1000 Index is a broad-based index covering mid- to large cap equity securities in the United States.

INVESTMENT ADVISER AND INVESTMENT SUB-ADVISER

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the “Adviser”)

Investment Sub-Adviser: Alpha Architect, LLC

PORTFOLIO MANAGERS

Messrs. Wesley R. Gray and John R. Vogel are co-portfolio managers for the Fund. Messrs. Gray and Vogel have been primarily and jointly responsible for the day-to-day management of the Fund since 2022.

PURCHASE AND SALE OF SHARES

Individual Shares are listed on a national securities exchange and may only be purchased and sold in the secondary market through a broker-dealer at a market price. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (at a “premium”) or less than NAV (at a “discount”). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying and selling Shares in the secondary market (the “bid/ask spread”).

TAX INFORMATION

The Fund's distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an IRA or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
